

Mathematical literacy (數學能力) is an individual's capacity to identify, to understand, and to engage in mathematics and make well-founded judgements about the role that mathematics plays, as needed for an individual's current and future private life, occupational life, social life with peers and relatives, and life as a constructive, concerned and reflective citizen.

Three dimensions of mathematical literacy:

- ❖ Processes
- ❖ Content
- ❖ Context

Mathematical Processes

1. mathematical thinking and reasoning
2. mathematical argumentation
3. mathematical communication
4. modelling
5. problem posing and solving
6. representation
7. using symbolic, formal and technical language and operations
8. use of aids and tools

Levels of Mathematical Competency

Class 1: reproduction, definitions, and computations

Class 2: connections and integration for problem solving

Class 3: mathematisation, mathematical thinking,
generalisation and insight

Mathematical Content

in terms of “overarching concepts”

- (1) Change and relationships
- (2) Space and shape
- (3) Quantity and uncertainty *

* NOT to be assessed in the current test

Mathematical Situations and Contexts (culturally relevant)

For a student (in order of relevance or distance):

Private life (daily life), school life, work and sports, the local community and society as encountered in daily life, and scientific contexts

Tasks based on “*authentic*” contexts which are likely to occur in real-world setting

Scores in the Test on Mathematical Literacy

(all expressed in percentages)

	English version	Chinese version	Pooled together
Total math score			
Boys	66.16	57.83	59.34
Girls	59.34	53.60	54.99
All	62.20	55.76	57.12
Score on “Change” items			
Boys	61.65	53.87	55.28
Girls	55.56	49.90	51.27
All	58.11	51.93	53.24

Boys	64.36	55.65	57.22
Girls	56.07	50.51	51.85
All	59.55	53.13	54.49

Gender difference:

Boys scored significantly higher than girls in “Total math score,” “Score on Change items,” and “Score on Space items” in both language versions (and therefore in the pooled results).

Difference in performance in the two content areas:

- (1) Boys scored significantly higher in items of “Space and shape” than in items of “Change and relationships” in both language versions (and therefore in the pooled results).
- (2) This is NOT found for girls.
- (3) Students (boys and girls together) scored significantly higher in items of “Space and shape” than in items of “Change and relationships” in both language versions (and therefore in the pooled results).

Space and shape

Easiest item: M144Q03 (mean score: 0.91)

(no. of painted surfaces on a block)

Hardest item: M266Q01 (mean score: 0.18)

(perimeter of some irregular polygons)

Change and relationships

Easiest item: M155Q04 (mean score: 0.93)

(considering change in some statistics)

Hardest item: M192Q01 (mean score: 0.28)

(rise of water level in containers of various shapes)

三角形

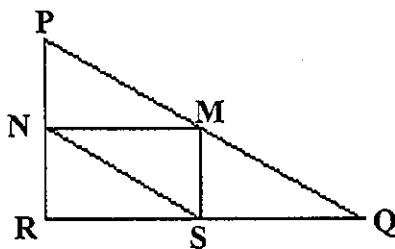

問題 64： 三角形

M161Q01

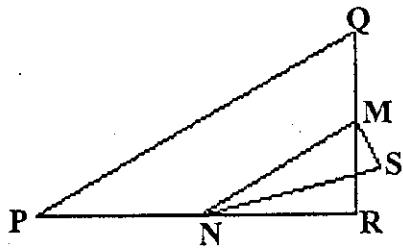

圈出一個符合以下描述的圖形。

三角形 PQR 是直角三角形，R 是直角。RQ 線較 PR 線短，M 是 PQ 線的中點，而 N 則是 QR 線的中點，S 是三角形內的一點，MN 線較 MS 線長。

農場

下面這幀相片是一間屋頂呈金字塔形的農舍。

以下是一名學生所繪製的農舍屋頂的數學模型，並已列出不同的長度。

模型中，閣樓地板 $ABCD$ 是個正方形。支撐屋頂的橫樑是方木架（直棱柱） $EFGHKLMN$ 的邊緣。 E 是 AT 的中點， F 是 BT 的中點， G 是 CT 的中點， H 是 DT 的中點。金字塔頂的所有邊長都是 12 米。

問題 45：農場

M037Q01

請計算出閣樓地板 ABCD 的面積。

閣樓地板 ABCD 的面積是 = 144 平方米

蘋果

一個農夫按照正方形的規律種植蘋果樹。為了保護果樹免受強風侵襲，他在果園的周圍栽種了針葉樹。

下面是栽種情況的示意圖，根據蘋果樹的行數(n)，你可以看到蘋果樹和針葉樹的種植規律。

問題 50：蘋果

M136Q02- 00 11 12 13 14 15 99

你可以用以下兩條公式，計算出上述方式所種植的蘋果樹和針葉樹的棵數：

$$\text{蘋果樹的棵數} = n^2$$

$$\text{針葉樹的棵數} = 8n$$

n 是蘋果樹的行數。
