

15 - Development of an interactive course for clinical approach to haematological malignancies and interpretation of blood count results.

Tools / Services	Pedagogical Uses
	<p>The micromodule “Haematological Oncology Primer” was launched successfully for the entire batch of over 200 final MBChB students in June 2016. Students have found the material very useful and the presentation format user friendly. Flipped classroom engagement has been successful and the conduct of workshops and bedside tutorials were well received by the students. We will proceed to launch all additional micromodules in this course in the 2017 academic year for final MBChB students and we will also open this course material for junior clerkship year students.</p> <p>In addition, given the success of this micromodule flipped classroom approach, all the lectures conducted by the Department of Clinical Oncology for final MBChB students for this academic year have been moved to the e-learning platform as a department wide initiative.</p>
