

1 (Ratio-test) Let (x_n) be a positive seq. III A
 $(x_n > 0 \forall n)$ such that $\lim_{n \rightarrow \infty} \frac{x_{n+1}}{x_n} = x < 1$.
 Show that $\lim_{n \rightarrow \infty} x_n = 0$.

(Take r s.t. $x < r < 1$, and take $N \in \mathbb{N}$ s.t.
 $\frac{x_{n+1}}{x_n} < r \forall n \geq N$. Show that $x_n < r^{n-N} x_N$

$\forall n \geq N$ and note that $r^{n-N} \rightarrow 0$ as $n \rightarrow \infty$.)
 2* (Root-test). Similar as Q1 but assumption
 is replaced by $\lim_{n \rightarrow \infty} x_n^{1/n} = x < 1$.

3* Show that $n \ll n^2 \ll 2^n \ll 100^n \ll n! \leq n^n$
 where e.g. $n! \ll n^n$ is to be read as $\lim_{n \rightarrow \infty} \frac{n!}{n^n} = 0$

4. Show that, as $n \rightarrow \infty$,

a) $n^{1/n} \rightarrow 1$. (Hint: write $n^{1/n} = 1 + \delta_n$)

b) $n^{1/n^2} \rightarrow 1$. (Hint: Squeeze Th)

5. Let (x_n) be a positive sequence and let

$$S_n = \sum_{i=1}^n x_i \quad \forall n \in \mathbb{N}$$

Suppose \exists a constant $M (\in \mathbb{R})$ s.t. $S_n \leq M \forall n$.

Show that the "series" $\sum_{n=1}^{\infty} x_n$ converges in the
 sense that $\lim_{n \rightarrow \infty} S_n$ exists in \mathbb{R} .

6* Let $(x_n), (y_n)$ be positive sequences such that
 $x_n \leq y_n \forall n$.

Suppose $\sum_{n=1}^{\infty} y_n$ converges. Show that $\sum_{n=1}^{\infty} x_n$

also converges (Comparison Test of Series Convergence)

7* Show that absolutely convergent series is convergent:
 $\sum_{n=1}^{\infty} |x_n| < +\infty \Rightarrow \sum_{n=1}^{\infty} x_n$ conv. (Hint: Cauchy criterion)
