

## 1. Definition.

Let  $A, B$  be sets.  $A$  is said to be of cardinality equal to  $B$  if there is a bijective function from  $A$  to  $B$ . We write  $A \sim B$ .

**Remark on notation.** Where  $A$  is not of cardinality equal to  $B$ , we write  $A \not\sim B$ .

## 2. Theorem (I). (Properties of $\sim$ .)

(1) Let  $A$  be a set.  $A \sim \emptyset$  iff  $A = \emptyset$ .

(2) Let  $x, y$  be objects.  $\{x\} \sim \{y\}$ .

(3) Let  $A, B, C$  be sets.

The following statements hold:

(3a)  $A \sim A$ .

(3b) Suppose  $A \sim B$ . Then  $B \sim A$ .

(3c) Suppose  $A \sim B$  and  $B \sim C$ .

Then  $A \sim C$ .

(4) Let  $A, B, C, D$  be sets.

The following statements hold:

(4a) Suppose  $A \sim C$  and  $B \sim D$ .

Then  $A \times B \sim C \times D$ .

(4b) Suppose  $A \sim C$ .

Then  $\mathfrak{P}(A) \sim \mathfrak{P}(C)$ .

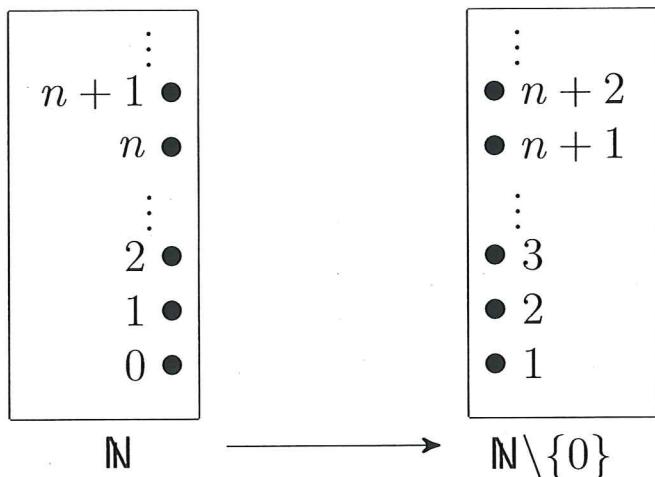

(4c) Suppose  $A \sim C$  and  $B \sim D$ .

Then  $\text{Map}(A, B) \sim \text{Map}(C, D)$ .

### 3. Example ( $\alpha$ ).

$$\mathbb{N} \sim \mathbb{N} \setminus \{0\}.$$

(a) *Idea.*

(b) *Formal argument.*

‘Blobs-and-arrows’ diagram for some bijective function  $f : \mathbb{N} \longrightarrow \mathbb{N} \setminus \{0\}$ ?

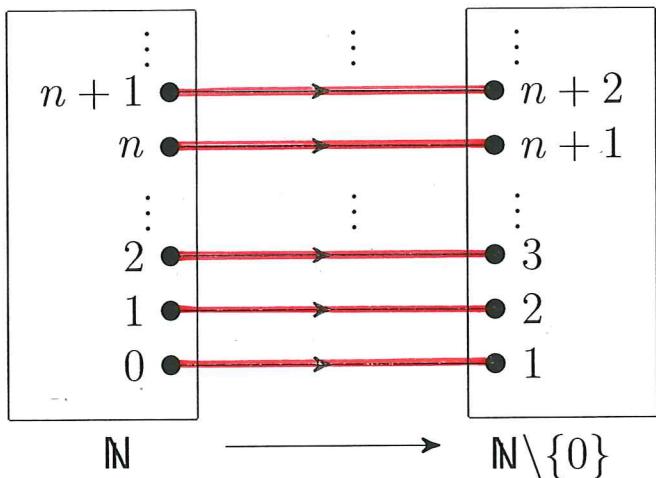

Graph of  $f$ ?

Formula of definition of  $f$ ?

**Example ( $\alpha$ ).**

$$\mathbb{N} \sim \mathbb{N} \setminus \{0\}.$$

(a) *Idea.*

(b) *Formal argument.*

'Blobs-and-arrows' diagram for some bijective function  $f : \mathbb{N} \rightarrow \mathbb{N} \setminus \{0\}$ ?

Graph of  $f$ ?

$$\{ (x, x+1) \mid x \in \mathbb{N} \}$$

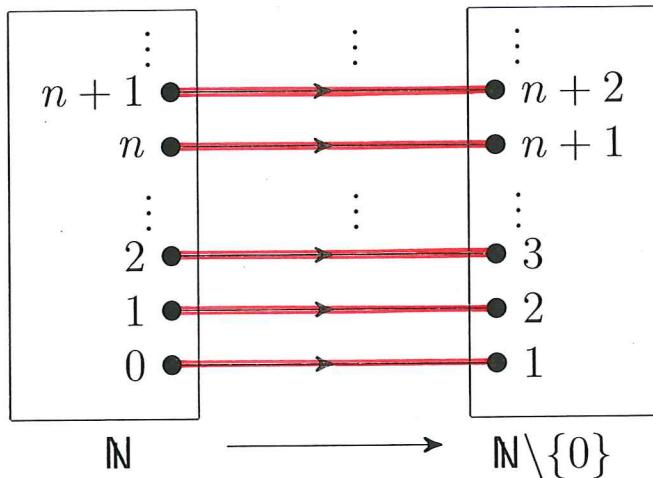

Formula of definition of  $f$ ?

$$f(x) = x+1 \text{ for any } x \in \mathbb{N}.$$

Example ( $\alpha$ ).

$$\mathbb{N} \sim \mathbb{N} \setminus \{0\}.$$

(a) Idea.

'Blobs-and-arrows' diagram for some bijective function  $f : \mathbb{N} \rightarrow \mathbb{N} \setminus \{0\}$ ?

Graph of  $f$ ?

$$\{(x, x + 1) \mid x \in \mathbb{N}\}.$$

Formula of definition of  $f$ ?

$$f(x) = x + 1 \text{ for any } x \in \mathbb{N}.$$

(b) Formal argument.

$$\text{Let } F = \{(x, y) \mid x, y \in \mathbb{N} \text{ and there exists some } t \in \mathbb{N} \text{ such that } x = t \text{ and } y = t + 1\}.$$

$$\text{Note that } F \subset \mathbb{N} \times (\mathbb{N} \setminus \{0\}).$$

$$\text{Define } f = (\mathbb{N}, \mathbb{N} \setminus \{0\}, F).$$

$$f \text{ is a relation from } \mathbb{N} \text{ to } \mathbb{N} \setminus \{0\}.$$

Now verify that  $f$  is a bijective function.

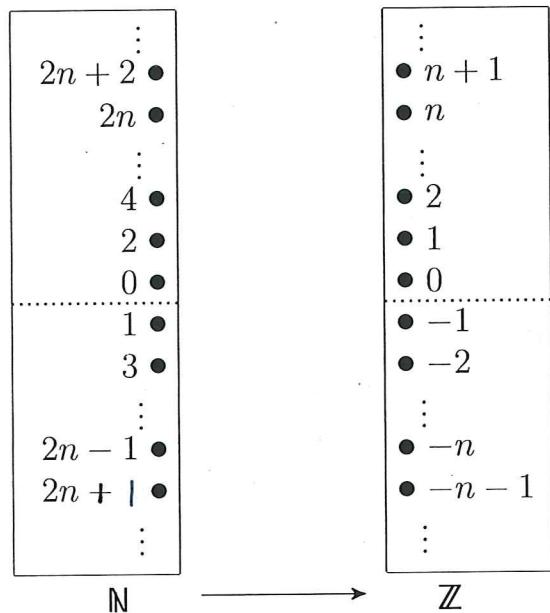

What to check?

- Condition (I).
- Condition (V).
- Condition (S).
- Condition (I).

#### 4. Example ( $\beta$ ).

$$\mathbb{N} \sim \mathbb{Z}.$$

(a) *Idea.*

(b) *Formal argument.*

'Blobs-and-arrows' diagram for some bijective function  $f : \mathbb{N} \rightarrow \mathbb{Z}?$

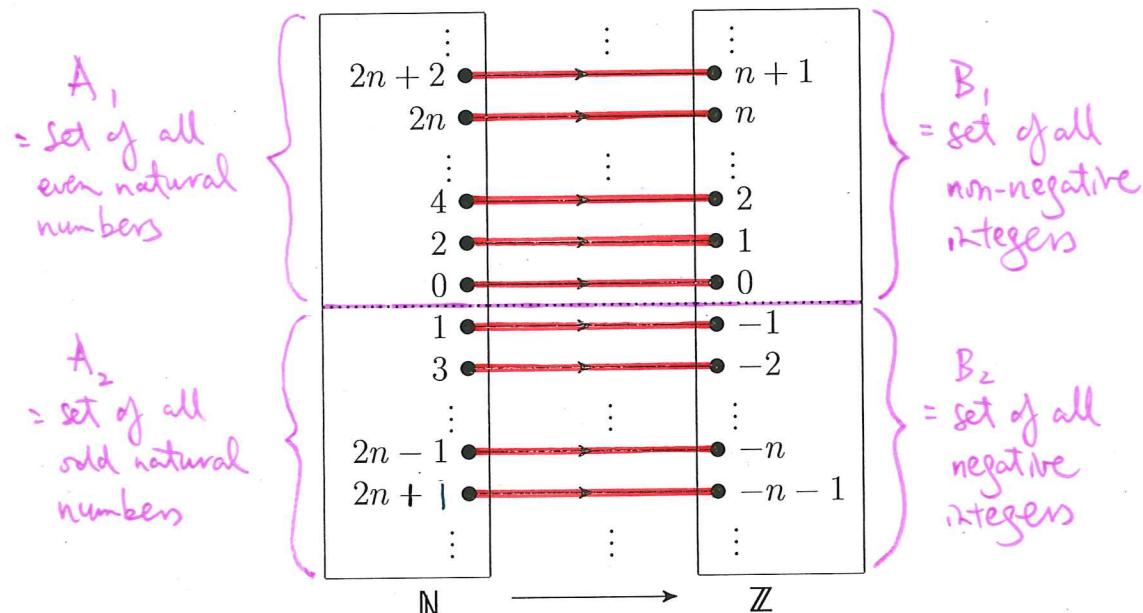

Formula of definition of  $f$ ?

Example ( $\beta$ ).

$$\mathbb{N} \sim \mathbb{Z}$$

(a) Idea.

(b) Formal argument.

'Blobs-and-arrows' diagram for some bijective function  $f : \mathbb{N} \rightarrow \mathbb{Z}$ ?

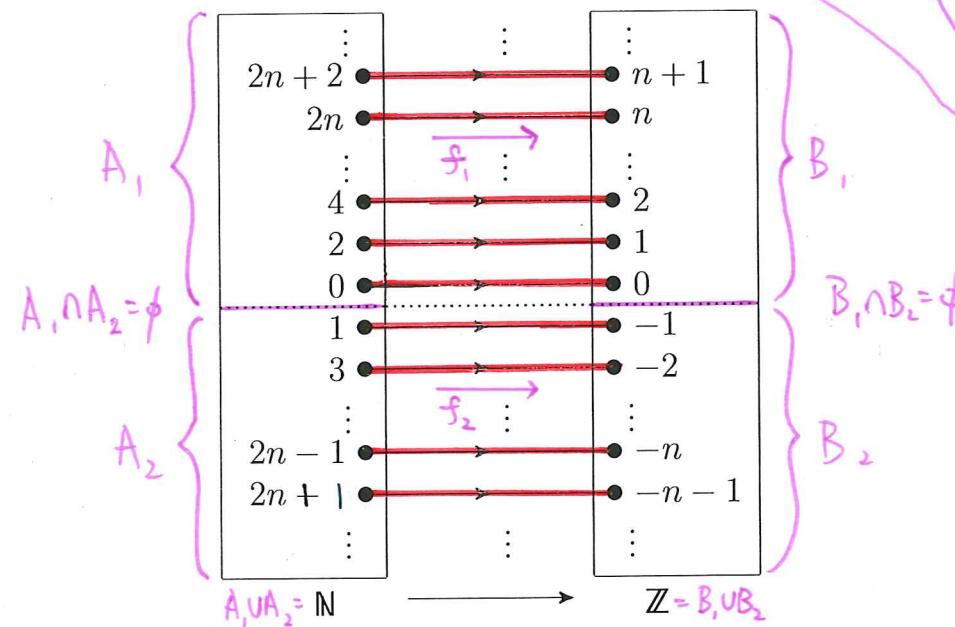

Formula of definition of  $f$ ?

$$f(x) = \begin{cases} \frac{x}{2} & \text{if } x \text{ is even.} \\ -\frac{x+1}{2} & \text{if } x \text{ is odd.} \end{cases}$$

## Example ( $\beta$ ).

$\mathbb{N} \sim \mathbb{Z}$ .

(a) Idea.

'Blobs-and-arrows' diagram for some bijective function  $f : \mathbb{N} \rightarrow \mathbb{Z}$ ?

Formula of definition of  $f$ ?

$$f(x) = \begin{cases} x/2 & \text{if } x \text{ is even} \\ -(x+1)/2 & \text{if } x \text{ is odd} \end{cases}$$

$f_1 : A_1 \rightarrow B_1$  is the bijective function with graph  $F_1$ .  
 $f_2 : A_2 \rightarrow B_2$  is the bijective function with graph  $F_2$ .

(b) Formal argument.

Let

$$F_1 = \{(2x, x) \mid x \in \mathbb{N}\},$$

$$F_2 = \{(2x-1, -x) \mid x \in \mathbb{N} \setminus \{0\}\},$$

and  $F = F_1 \cup F_2$ .

Note that  $F \subset \mathbb{N} \times \mathbb{Z}$ .

Define  $f = (\mathbb{N}, \mathbb{Z}, F)$ .

$f$  is a relation from  $\mathbb{N}$  to  $\mathbb{Z}$ .

Now verify that  $f$  is a bijective function.

What is  $f$  really?

It is the bijective function obtained by 'glueing together' the bijective functions

$$f_1 = (A_1, B_1, F_1), \quad f_2 = (A_2, B_2, F_2).$$

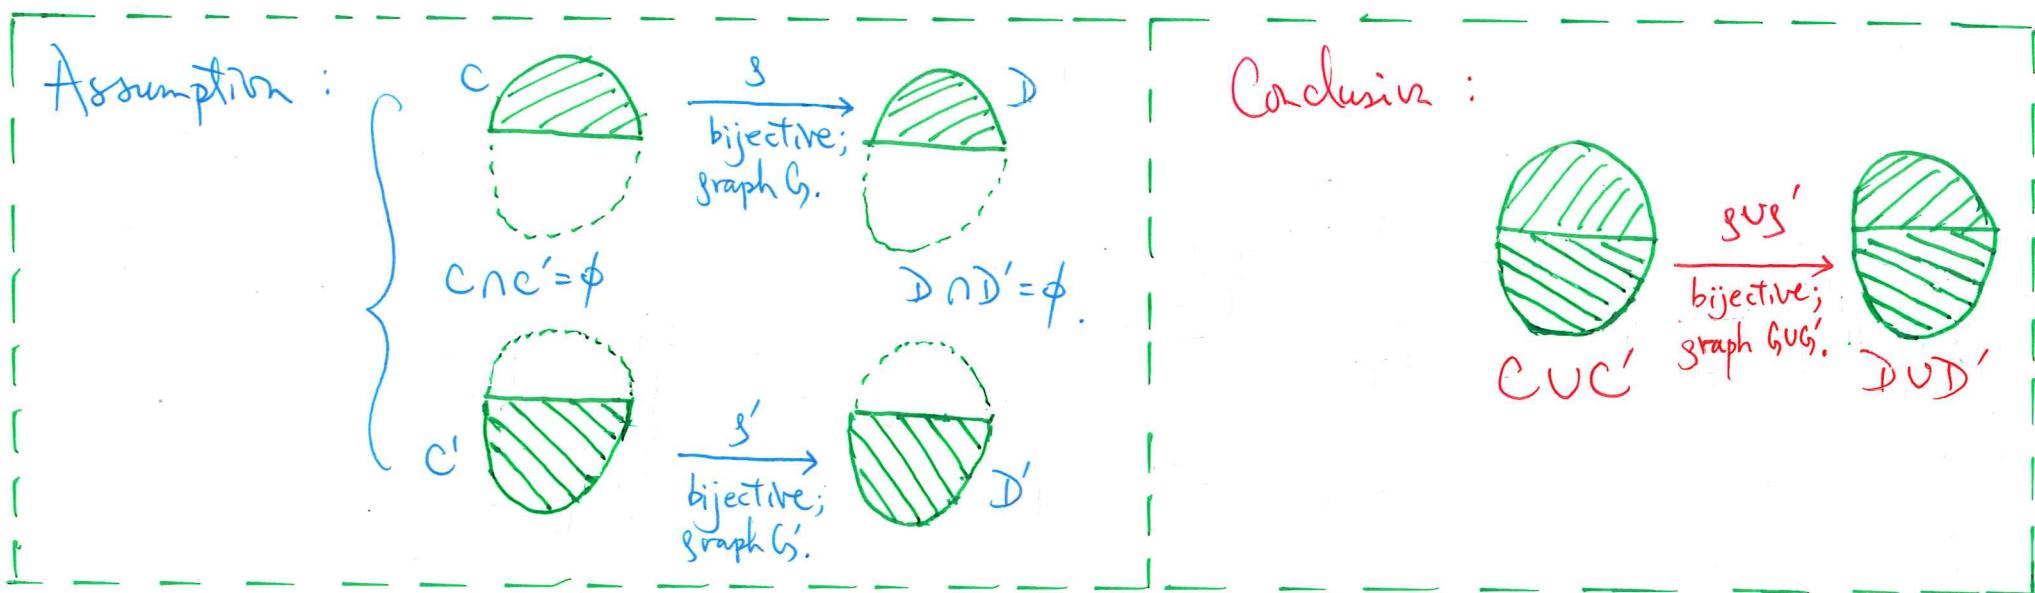

## 5. 'Glueing Lemma'.

**Theorem (II).** ('Baby version' of 'Glueing Lemma').

Let  $C, C', D, D'$  be sets, and  $g = (C, D, G)$ ,  $g' = (C', D', G')$  be bijective functions.

Suppose  $C \cap C' = \emptyset$  and  $D \cap D' = \emptyset$ .

Then  $(C \cup C', D \cup D', G \cup G')$  is a bijective function.

**Corollary (III).**

Let  $C, C', D, D'$  be sets. Suppose  $C \sim D$  and  $C' \sim D'$ .

Also suppose  $C \cap C' = \emptyset$  and  $D \cap D' = \emptyset$ .

Then  $C \cup C' \sim D \cup D'$ .

## ‘Glueing Lemma’.

Theorem (II) and Corollary (III) may be extended to the situation for infinite sequences of sets and generalized unions:

### **Theorem (IV). (‘Glueing Lemma’.)**

Let  $A, B$  be sets.

Let  $\{C_n\}_{n=0}^{\infty}, \{D_n\}_{n=0}^{\infty}$  be infinite sequences of subsets of  $A, B$  respectively.

Let  $\{G_n\}_{n=0}^{\infty}$  be an infinite sequence of subsets of  $A \times B$ .

Suppose  $\{(C_n, D_n, G_n)\}_{n=0}^{\infty}$  is an infinite sequence of bijective functions.

Suppose that for any  $j, k \in \mathbb{N}$ , if  $j \neq k$  then  $C_j \cap C_k = \emptyset$  and  $D_j \cap D_k = \emptyset$ .

Then  $\left( \bigcup_{n=0}^{\infty} C_n, \bigcup_{n=0}^{\infty} D_n, \bigcup_{n=0}^{\infty} G_n \right)$  is a bijective function.

## Corollary (V).

Let  $A, B$  be sets.

Let  $\{C_n\}_{n=0}^{\infty}, \{D_n\}_{n=0}^{\infty}$  be infinite sequences of subsets of  $A, B$  respectively.

Suppose that for any  $n \in \mathbb{N}$ ,  $C_n \sim D_n$ .

Also suppose that for any  $j, k \in \mathbb{N}$ , if  $j \neq k$  then  $C_j \cap C_k = \emptyset$  and  $D_j \cap D_k = \emptyset$ .

Then  $\bigcup_{n=0}^{\infty} C_n \sim \bigcup_{n=0}^{\infty} D_n$ .

## 6. Example ( $\gamma$ ).

$$\mathbb{N} \sim \mathbb{N}^2.$$

**Remark.** Hence, by Theorem (I) and the result in Example ( $\beta$ ), we have  $\mathbb{N}^m \sim \mathbb{N}$  and  $\mathbb{Z}^m \sim \mathbb{Z}$  for any  $m \in \mathbb{N}^*$ .

(a) *Idea.*

Break up each of  $\mathbb{N}$ ,  $\mathbb{N}^2$  into many many parts.

Match the parts with bijective functions.

Then ‘glue up’ these bijective functions to obtain a bijective function from  $\mathbb{N}$  to  $\mathbb{N}^2$ .

There are many ways to do it.

(b) *Correspondence 1.* ...

(c) *Correspondence 2.* ...

(d) *Correspondence 3.* ...

**Example ( $\gamma$ ).**

$$\mathbb{N} \sim \mathbb{N}^2.$$

(b) *Correspondence 1.*

(b2)  $I \sim (0, +\infty)$  if  $I$  is open.

(c) ...

(d) ...

(e) ...

- Respective arguments for (a), (b):

Make use of ‘linear functions’.

## Example ( $\delta$ ).

Suppose  $I$  is an interval with more than one point. Then  $I \sim \mathbb{R}$ .

- Outline of argument:

(a) ...

(b) ...

(c) Deduce that  $[0, 1] \sim [0, 1]$ . Similarly deduce that  $[0, 1] \sim (0, 1)$ .

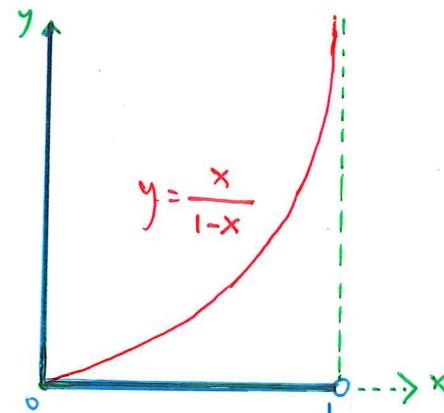

(d) Deduce that  $(0, 1) \sim (0, +\infty)$ . Similarly deduce that  $[0, 1] \sim [0, +\infty)$ .

(e) Deduce that  $(0, 1) \sim \mathbb{R}$ .

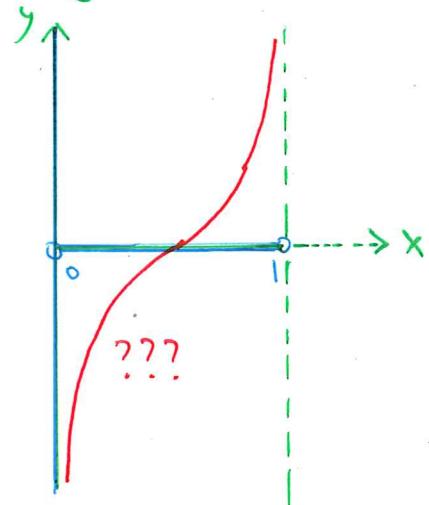

Respective arguments for (d), (e):

Make use of 'rational functions'.

• Argument for (d):

• Argument for (e):

Argument for (c)? Non-trivial.

## Example ( $\delta$ ).

Argument for (c):  $[0, 1] \sim [0, 1]$ ?  $[0, 1] \sim (0, 1)$ ?

- *Idea.*

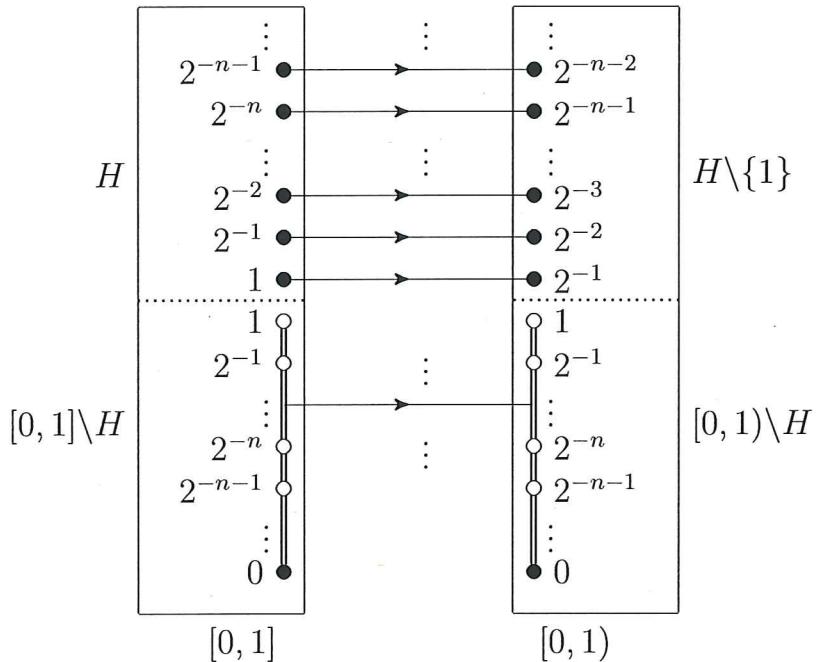

$[0, 1]$  is almost the whole of  $[0, 1]$  except that it ‘misses’ the point 1.

Try to ‘modify’ the identity function from  $[0, 1]$  to  $[0, 1]$  to get a bijective function from  $[0, 1]$  to  $[0, 1]$ .

- *Trick.*

Dig many many holes in  $[0, 1]$ ,  $[0, 1]$  at identical positions so that after this digging, what remain of these two sets are the same set.

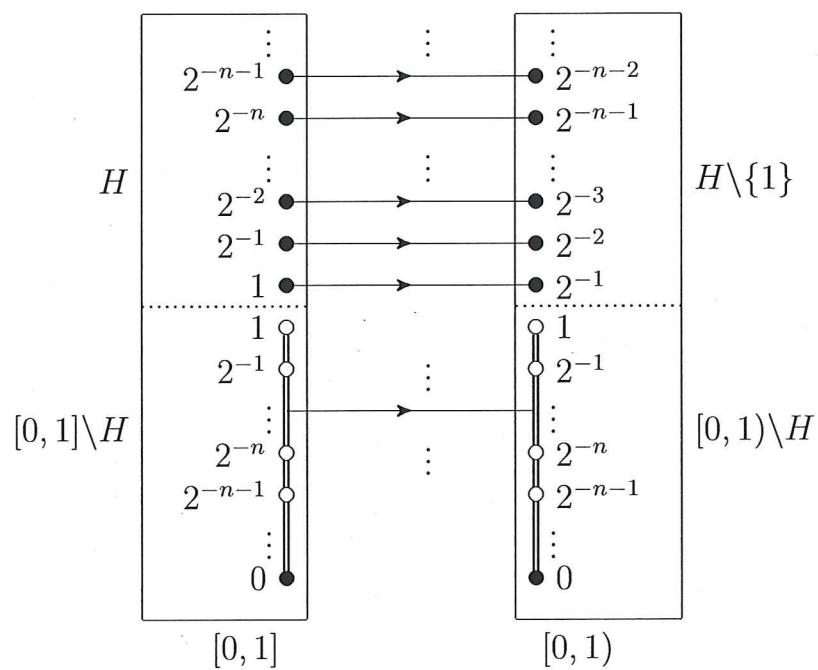

(But what to do with the ‘debris’? Don’t throw them away.)

## Example ( $\delta$ ).

Argument for (c):  $[0, 1] \sim [0, 1]$ ?  $[0, 1] \sim (0, 1)$ ?

- Trick.

- Formal argument.

$$\text{Define } H = \left\{ \frac{1}{2^n} \mid n \in \mathbb{N} \right\}.$$

Note that  $[0, 1] \setminus H = [0, 1) \setminus H$ .

Define  $F_1 = \{(x, x) \mid x \in [0, 1] \setminus H\}$ ,  
 $F_2 = \left\{ \left(x, \frac{x}{2}\right) \mid x \in H\right\}$  and  
 $F = F_1 \cup F_2$ .

Verify that  $f_1 = ([0, 1] \setminus H, [0, 1) \setminus H, F_1)$ ,  
 $f_2 = (H, H \setminus \{1\}, F_2)$  are bijective functions.

Define  $f = ([0, 1], [0, 1), F)$ .  $f$  is a relation.  
 $f$  is a bijective function according to the ‘Glueing Lemma’.

## 8. Example ( $\epsilon$ ).

Suppose  $A$  is a set. Then  $\mathfrak{P}(A) \sim \text{Map}(A, \{0, 1\})$ .

(a) Idea (through one example).

Let  $A = \{p, q, r\}$ , where  $p, q, r$  are pairwise distinct.

'Light bulb' analogy:

\* Imagine:

$p, q, r$  are points on the plane.

One light-bulb is fixed at each point.

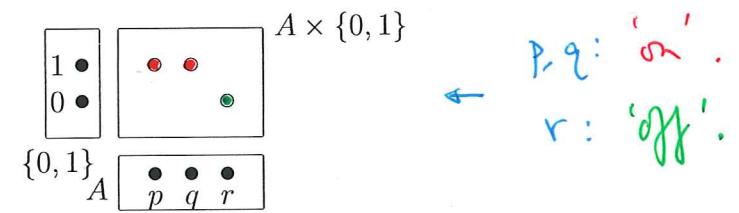

\* Name any subset  $S$  of  $A$ .

Turn on the lights at the elements of  $S$ .

Leave others alone.

This give an 'overall state' of the 'light bulbs' in  $A$  according to what  $S$  is.

\* For instance, when  $S = \{p, q\}$ , we have:

Here '0' stands for off, and '1' stands for on.

\* Such a diagram is in fact a graph of the function from  $A$  to  $\{0, 1\}$ .

(When  $S = \{0, 1\}$ , the function concerned assigns  $p, q, r$  to 1, 1, 0 respectively.)

**Example ( $\epsilon$ ).**

Suppose  $A$  is a set. Then  $\mathfrak{P}(A) \sim \text{Map}(A, \{0, 1\})$ .

(a) *Idea* (through one example).

Let  $A = \{p, q, r\}$ , where  $p, q, r$  are pairwise distinct.

‘Light bulb’ analogy:

\* *Observation.*

Each individual element of  $\mathfrak{P}(A)$  corresponds to exactly one ‘overall state’ of the “light-bulbs” in  $A$ .

So we have a ‘natural’ ‘exact correspondence’ between

the subsets of  $A$

and

the functions from  $A$  to  $\{0, 1\}$  (as visualized by their respective graphs).

Subsets of $A$	Functions from $A$ to $\{0, 1\}$ , represented by their graphs	Subsets of $A$	Functions from $A$ to $\{0, 1\}$ , represented by their graphs
$\emptyset$	<p><math>A \times \{0, 1\}</math></p> <p><math>p, q, r : \text{all 'off'}</math>.</p>	$\{p, q, r\}$	<p><math>A \times \{0, 1\}</math></p> <p><math>p, q, r : \text{all 'on'}</math>.</p>
$\{p\}$	<p><math>A \times \{0, 1\}</math></p> <p><math>p : \text{'on'}</math>. <math>q, r : \text{'off'}</math>.</p>	$\{q, r\}$	<p><math>A \times \{0, 1\}</math></p> <p><math>q, r : \text{'on'}</math>. <math>p : \text{'off'}</math>.</p>
$\{q\}$	<p><math>A \times \{0, 1\}</math></p> <p><math>q : \text{'on'}</math>. <math>p, r : \text{'off'}</math>.</p>	$\{p, r\}$	<p><math>A \times \{0, 1\}</math></p> <p><math>p, r : \text{'on'}</math>. <math>q : \text{'off'}</math>.</p>
$\{r\}$	<p><math>A \times \{0, 1\}</math></p> <p><math>r : \text{'on'}</math>. <math>p, q : \text{'off'}</math>.</p>	$\{p, q\}$	<p><math>A \times \{0, 1\}</math></p> <p><math>p, q : \text{'on'}</math>. <math>r : \text{'off'}</math>.</p>

**Example ( $\epsilon$ ).**

Suppose  $A$  is a set. Then  $\mathfrak{P}(A) \sim \text{Map}(A, \{0, 1\})$ .

(b) *Formal argument.*

Suppose  $A$  is a set. Then  $A = \emptyset$  or  $A \neq \emptyset$ .

If  $A = \emptyset$  then  $\mathfrak{P}(A) = \{\emptyset\}$  and  $\text{Map}(A, \{0, 1\}) = \{(\emptyset, \{0, 1\}, \emptyset)\}$ . [Done.]

From now on suppose  $A \neq \emptyset$ .

For each  $S \in \mathfrak{P}(A)$ , define the function

$\chi_S^A : A \rightarrow \{0, 1\}$  by

$$\chi_S^A(x) = \begin{cases} 1 & \text{if } x \in S \\ 0 & \text{if } x \in A \setminus S. \end{cases}$$

Define the function

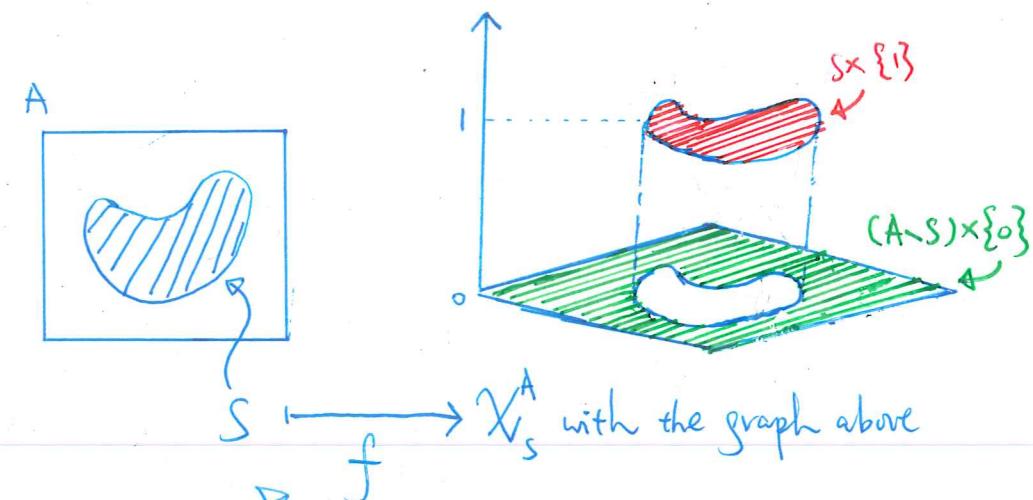

$f : \mathfrak{P}(A) \rightarrow \text{Map}(A, \{0, 1\})$

by

$$f(S) = \chi_S^A \quad \text{for any } S \in \mathfrak{P}(A).$$

Verify that  $f$  is bijective. (Fill in the detail.)

**Remark.**  $\chi_S^A$  is called the **characteristic function** of the set  $S$  in the set  $A$ .

## 9. Example ( $\zeta$ ).

$$\text{Map}(\mathbb{N}, \{0, 1\}) \sim (\text{Map}(\mathbb{N}, \{0, 1\}))^2.$$

(a) *Idea.*

Each element of  $\text{Map}(\mathbb{N}, \{0, 1\})$  is a function from  $\mathbb{N}$  to  $\{0, 1\}$ , and hence is an infinite sequence in  $\{0, 1\}$ .

Is there any natural ‘exact correspondence’ between infinite sequences in  $\{0, 1\}$  and ordered pairs of such sequences?

What can we say about the function from  $\text{Map}(\mathbb{N}, \{0, 1\})$  to  $(\text{Map}(\mathbb{N}, \{0, 1\}))^2$  defined by

$$(a_0, a_1, a_2, a_3, a_4, a_5, \dots) \longmapsto ((a_0, a_2, a_4, \dots), (a_1, a_3, a_5, \dots))$$

for each infinite sequence  $\{a_n\}_{n=0}^{\infty}$  in  $\{0, 1\}$ ?

• *Formal argument.* Exercise.

**Remarks.** More generally, we have:

- (a)  $\text{Map}(\mathbb{N}, \{0, 1\}) \sim (\text{Map}(\mathbb{N}, \{0, 1\}))^n$  for any  $n \in \mathbb{N} \setminus \{0\}$ .
- (b)  $\text{Map}(\mathbb{N}, B) \sim (\text{Map}(\mathbb{N}, B))^n$  for any  $n \in \mathbb{N} \setminus \{0\}$ , whenever  $B$  is a non-empty set.
