5 - Enhancing Student's Ability to Articulate Lymphatic Anatomy

Tools / Services	Pedagogical Uses
The software "Articulate Storyline 3" was used as a main tool for the development of this project. Services from ELITE were employed in the making of micromodule.	As the knowledge provided in micromodule 1 would be examined in the end-of-term exam, thirty minutes of a lecture had been changed into a flipped classroom to further consolidate the main concepts with UReply and to provide a channel for students to ask questions. The micromodule was uploaded onto Blackboard for students to view and get themselves familiarize with the topic one week before the flipped classroom session.
