Overview

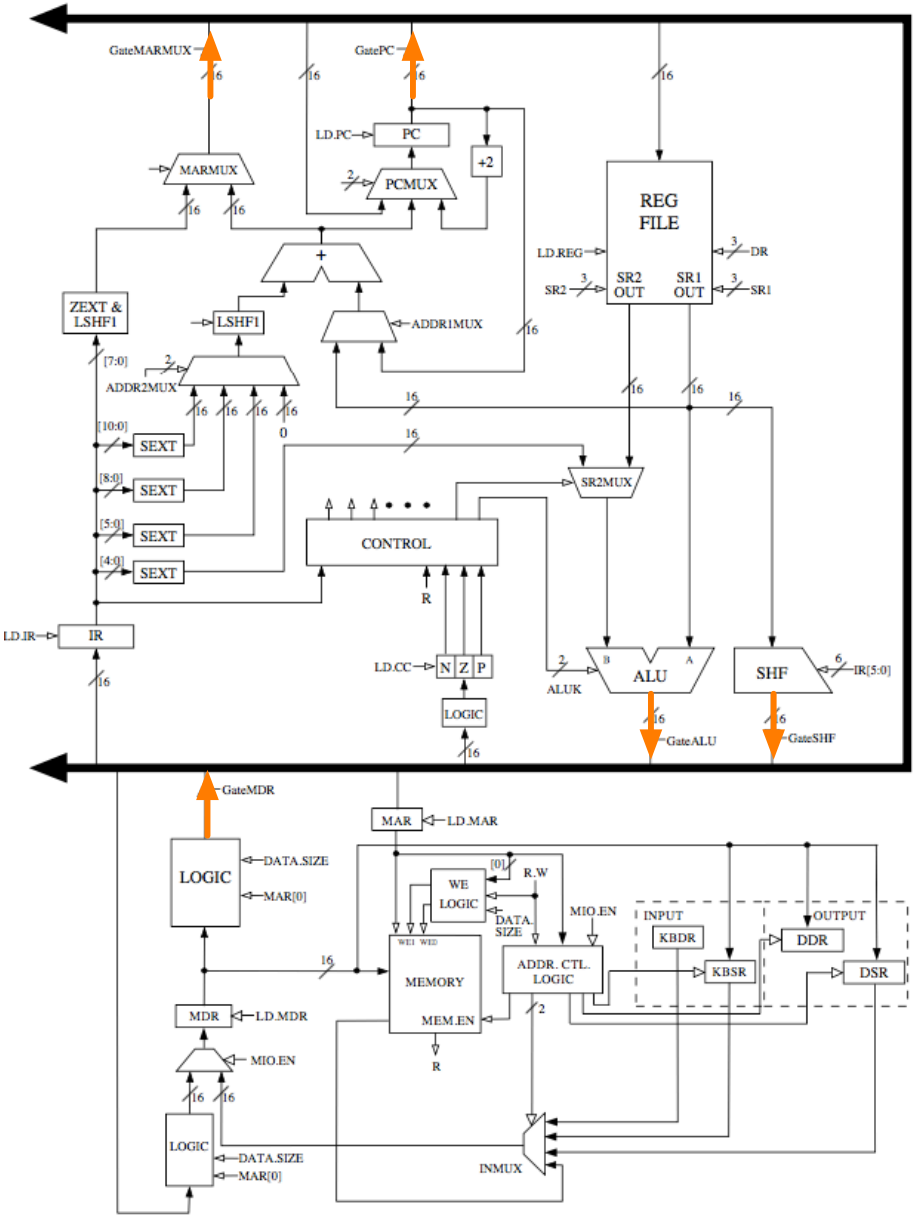
Overview

The Slides are self-contained? NO!

Do please refer to following document:

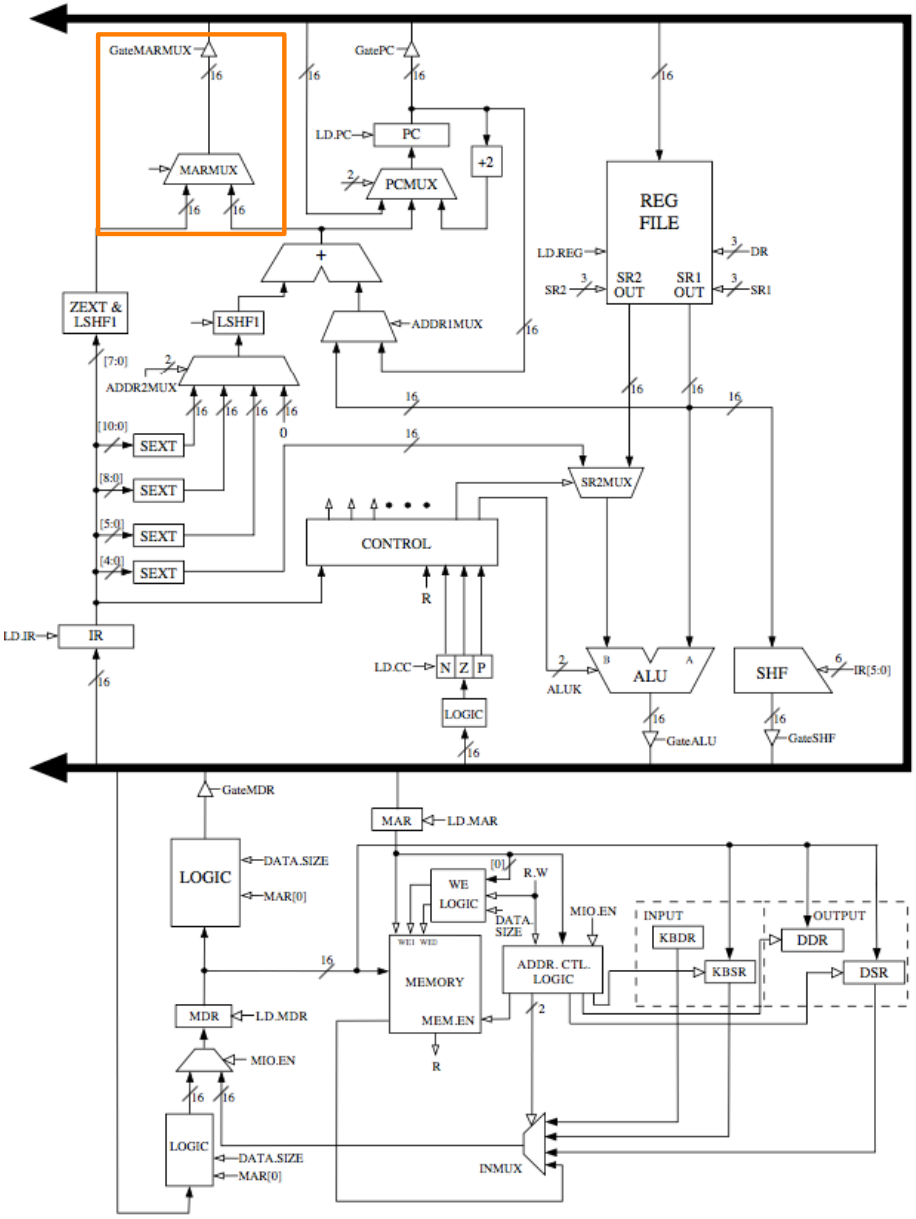
- LC-3b-datapath.pdf
- LC-3b-ISA.pdf

LC-3b Datapath



- Five major drivers: `MARMUX`, `PC`, `ALU`, `SHF`, `MDR`
- It is the means of data transfer between units

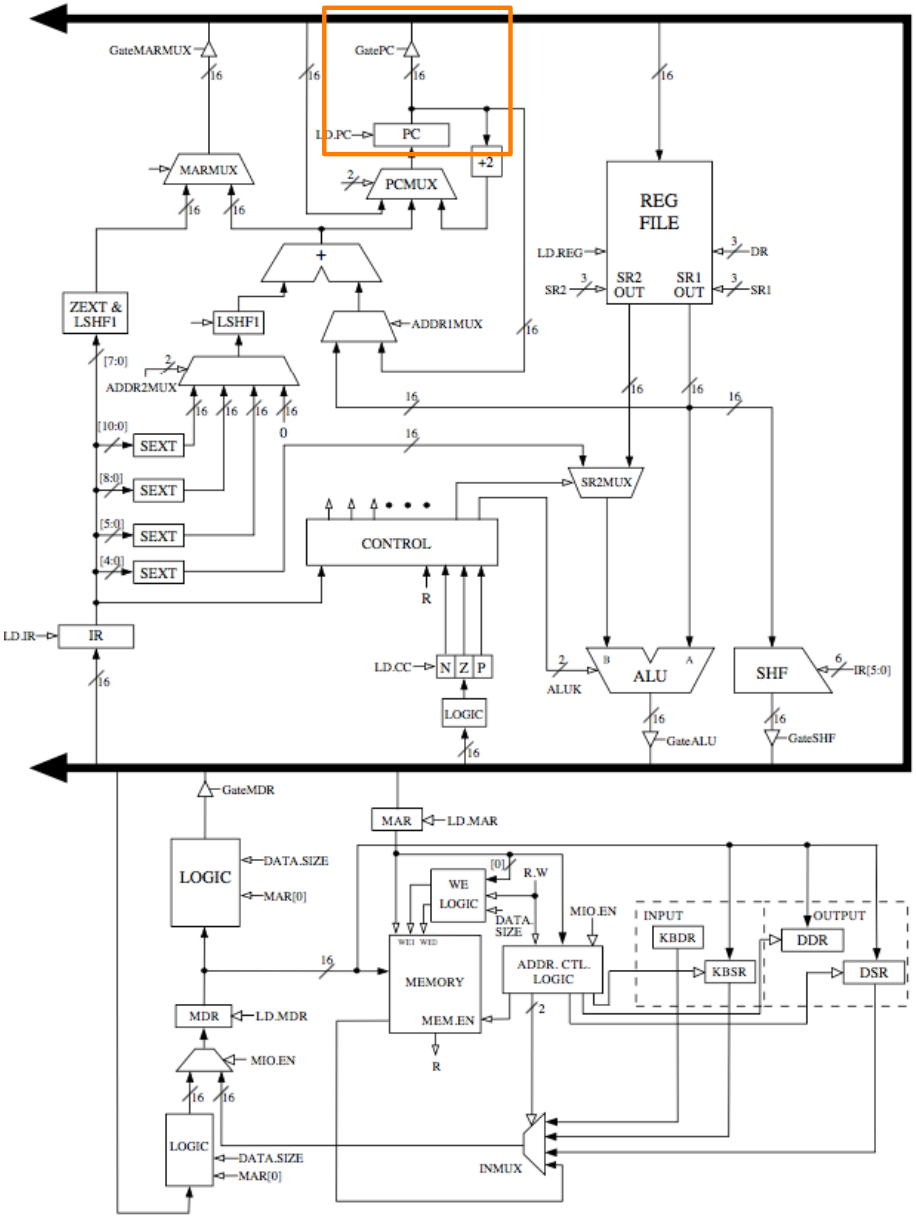
LC-3b Datapath



Driver `MARMUX`

- `int inputOfGateMARMUX;`
- Controlled by `MARMUX`
- from `IR[7:0]` or adder (defined in `inputOfMARMUXFromAdder`)
- `IR[7:0]` is through `LSHF1` (left shift 1 bit) & `ZEXT` (zero extended)
- Implementation of `inputOfMARMUXFromAdder` has been provided

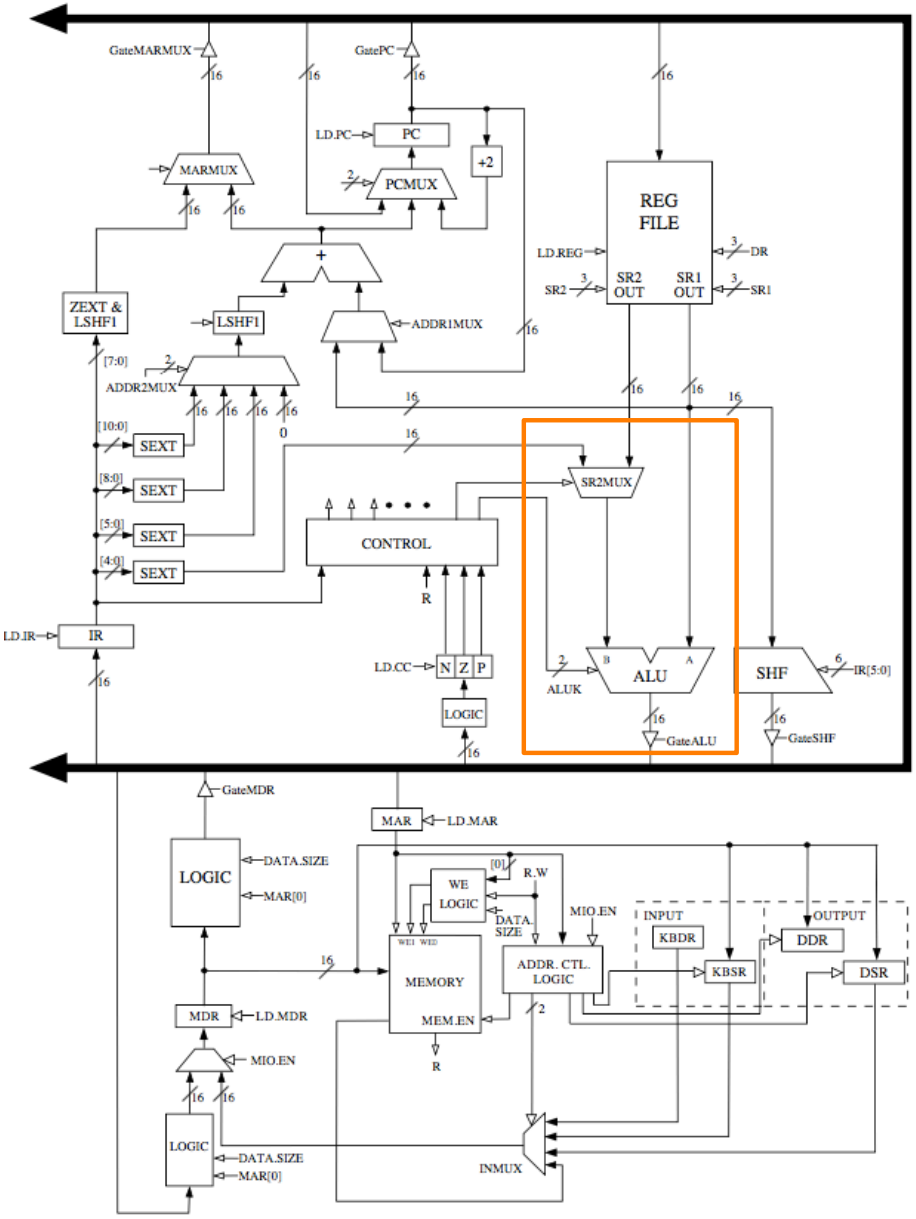
LC-3b Datapath



Driver `PC`

- `int inputOfGatePC;`
- Provided from PC

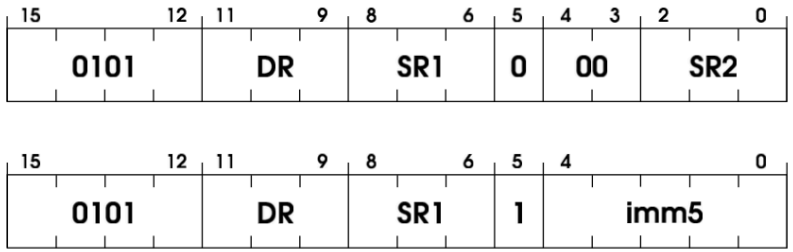
LC-3b Datapath



Driver `ALU`

- `int inputOfGateALU`
- `SR2MUX` is controlled by `IR[5:5]` (refer to `AND` instruction)

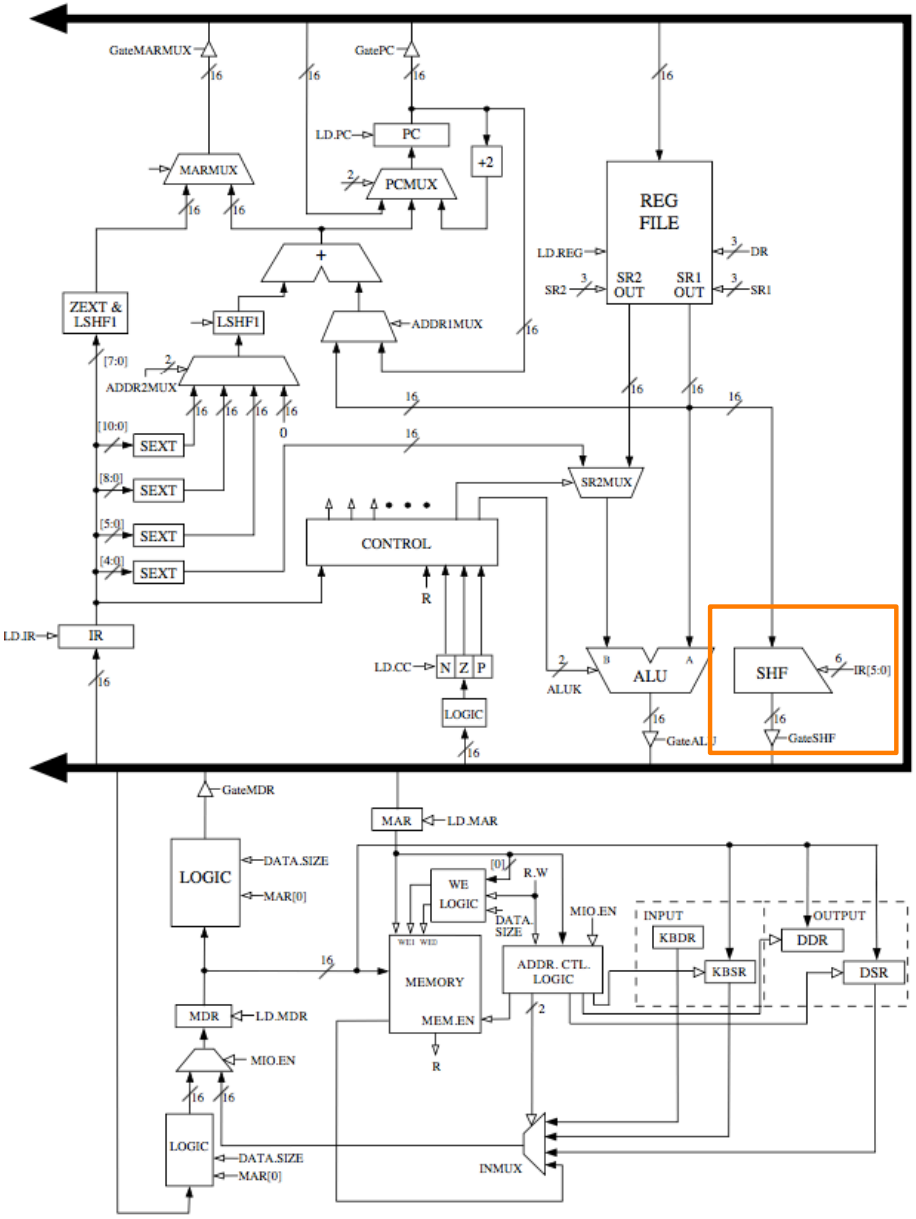
Encodings



Operation

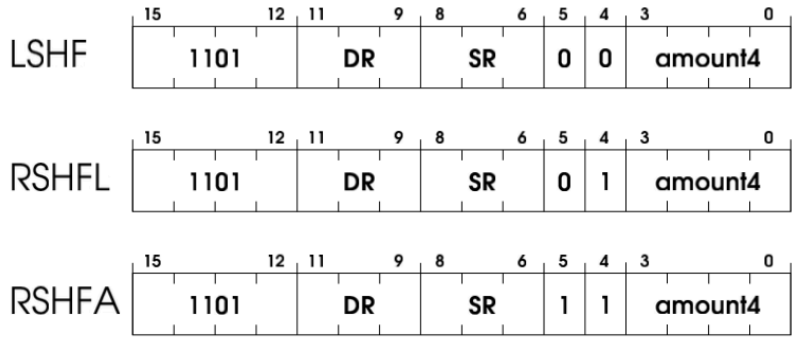
```
if (bit[5] == 0)
  DR = SR1 AND SR2;
else
  DR = SR1 AND SEXT(imm5);
setcc();
```

LC-3b Datapath



Driver `SHF`

- `int inputOfGateSHF`

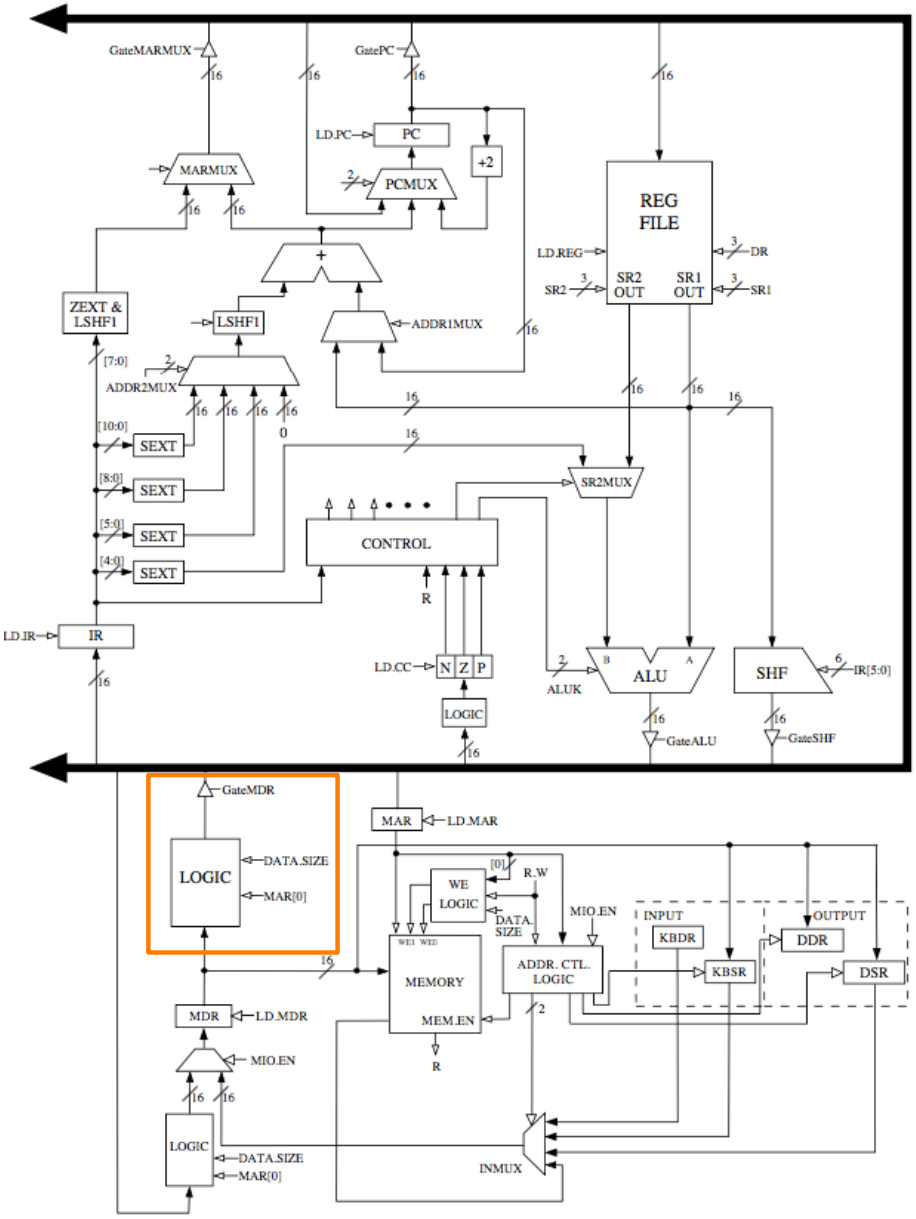


Operation

```
if (bit[4] == 0)
  DR = LSHF(SR, amount4);
else
  if (bit[5] == 0)
    DR = RSHF(SR, amount4, 0);
  else
    DR = RSHF(SR, amount4, SR[15]);
setcc();
```

- Implementation has been provided

LC-3b Datapath



Driver `MDR`

- `DATA_SIZE`: if 0 then byte base; if 1 then word base.
- If byte base, should check `MAR[0]`
  - If 0: `MDR[7:0]`
  - If 1: `MDR[15:8]`

Help on `GateALU`

- Input 1: `SR1` (please refer to Figure C.6 (b))
- Input 2: `SR2MUX`, select the second source operand (see instructions `AND XOR NOT`)

```
/* input of GateALU */
inputOfGateALU = blockALU
(
    GetALUK(CURRENT_LATCHES.MICROINSTRUCTION),
    CURRENT_LATCHES.REGS[blockSR1MUX(GetSR1MUX(CURRENT_LATCHES.
        MICROINSTRUCTION), CURRENT_LATCHES.IR)],
    blockSR2MUX(xxx)
);
```

Overview

Lab3-2 Assignment

```
515
516 /*
517  * Datapath routine emulating operations before driving the bus.
518  * Evaluate the input of tristate drivers
519  *        Gate_MARMUX,
520  *        Gate_PC,
521  *        Gate_ALU,
522  *        Gate_SHF,
523  *        Gate_MDR.
524  */
525 void eval_bus_drivers()
526 {
527     /*
528      *  Lab3-2 assignment
529      *
530      */
531 }
532
533
534 /*
535  * Datapath routine for driving the bus from one of the 5 possible
536  * tristate drivers.
537  */
538 void drive_bus()
539 {
540     /*
541      *  Lab3-2 assignment
542      *
543      */
544 }
545
```

Overview

Assignment Package

- `lc3bsim3-2.c, lc3bsim3-2.h`: codes to work on
- `libems3-2.a`: library
- `ucode3`: FSM
- `Makefile`
- `bench`: folder with benchmarks

Run the simulator:

1. `make`, then binary "lc3bsim3-2" is generated
2. `./lc3bsim3-2 ucode3 bench/toupper.cod`

Golden Results – case `toupper.cod`

1. run 6

```
Simulating for 6 cycles...

MemCycleCnt = 0
MEM_EN = 0, R_W = 0, WE0 = 0, WE1 = 0
MemCycleCnt = 0
MEM_EN = 1, R_W = 0, WE0 = 0, WE1 = 0
MemCycleCnt = 1
MEM_EN = 1, R_W = 0, WE0 = 0, WE1 = 0
MemCycleCnt = 2
MEM_EN = 1, R_W = 0, WE0 = 0, WE1 = 0
MemCycleCnt = 3
MEM_EN = 1, R_W = 0, WE0 = 0, WE1 = 0
MemCycleCnt = 4
MEM_EN = 1, R_W = 0, WE0 = 0, WE1 = 0
```

Golden Results – case `toupper.cod` (cont.)

2. rdump

```
