

4 - Apps for Innovative Learning

Tools / Services	Pedagogical Uses
<p>The web application is being developed using JavaScript and JQuery Mobile design.</p>	<p>The end product will have 4 separate modules.</p> <p>IT Concept is to help students to understand the most fundamental facts related to IT. IT Concept is mainly used before class to help them familiarize the basic materials so that class time could be spent on more difficult managerial issues.</p> <p>IT Strategy is to help student to internalize the study of strategies applied in the use of information systems. IT Strategy module could be used after class in their free time. Their answers could then be used to generate discussion in the next class.</p> <p>IT Case Study is designed for students to apply business common sense to gauge the feasibility of IT business before they start to embark on their own. It must be conducted before class. The result of which would be used in individual group discussion with the lecturer.</p> <p>IT Business is a business framework used to help students create their own IT businesses. IT must also be used outside the classroom, preferably in groups, so that students could come up with some feasible ideas before seeking the advise from the lecturer.</p> <p>At the end of using this holistic learning tool, each student would have created his or her own unique learning journal in Blackboard. Lecturer could use these journals to monitor the progress of the students and they could also use their own journal as a revision tool.</p>
