

He-Ro Chemicals Limited

Sharing from Student:

"I am so glad that I have the opportunity of joining the summer internship in He-Ro Chemicals. I was intrigued deeply by the advertisement since I found it on the broad. Before joining the summer internship, I thought chemical industry is quite unitary, only labs, factories, etc. I never thought of strategy consultancy service would be one of the members in the chemistry industry. It might one special choice for you and me to enter this industry, especially if you are interested in non lab job like me .

In this short period of time, I got many chances to reach different sections of the business. I have learned a lot and broaden my horizon through the variety of works done. At the very beginning, I helped in the part of presentation preparation works for projects, it helped me to figure out how this strategy consultancy service works and what kind of information was needed for clients. Then another trainee and I were assigned to work on an individual project about the information integration of a chemical material regarding to a specific usage. Other than works regarding to chemistry, management was also part of my work. I feel very grateful to He-Ro Chemical for letting me involve in the design of the deck of the Management intelligent, which is a very new concept and new try for the company."
