Over the past fifty years, scientific and technological advancements have greatly influenced the study of archaeological sites and our understandings of past human behaviour. A wide range of scientific techniques have now been established as standard research procedure, these 'scientific tools' are being used to reveal new paths of examination in the investigation of artefact biographies. The presentation will discuss three projects focusing on Chinese tradeware ceramics recovered from six archaeological sites dating from the ninth to mid-twentieth century located in Cambodia and Hong Kong. This talk will explore the capacity of multi-analytical studies and interdisciplinary perspectives in archaeology in expanding the knowledge of ceramic artefacts themselves as well as peoples of the past within this region.

Lorraine Leung is a PhD student in the Archaeology Department from the University of Sydney, Australia. Her research interests include archaeometry, East and Southeast Asian ceramics, foodstuffs and consumption & trade in the past. She is the recipient of Worldwide Universities Network (WUN) Global Scholarship Programme for Research Excellence, CUHK (2018-19).
