

# A BME Undergraduate Student Awards Innovation and Technology Scholarship 2022

One of our Year 3 undergraduate students, SIU Man Hei Connie, has awarded **The Innovation and Technology Scholarship Award** recently. The Innovation and Technology Scholarship Award is established under a joint sponsorship and support by the Innovation and Technology Commission and The Hongkong and Shanghai Corporation Limited (HSBC) which is organized by The Hong Kong Federation of Youth Groups (HKFYG). The Award recognizes outstanding non-final year local undergraduates whose curriculum are in science-related, technology, engineering, dental and medical disciplines, by providing a scholarship and a series of elite training opportunities, in order to widen students' international exposure, gain industry experience, and nurture students' passion and commitment toward science and technology. Connie is among the total of 25 awardees in Hong Kong.

Congratulations to Connie!

//Man Hei Siu, a Year 3 Biomedical Engineering student and an Asia Pacific Generation Connect Youth Envoy for the UN International Telecommunication Union (ITU), has immersed herself in promoting STEM, digital transformation, digital inclusion, and policy for young people. She has joined an attachment programme as a youth delegate at the International Telecommunication Union (ITU) World Telecommunication Development Conference (WTDC) Youth Summit in Rwanda, and will be joining the Swiss Federal Institute of Technology Lausanne (EPFL) as a research student.

“The attachment programmes would motivate my aspirations in combining digital transformation, innovation, and sustainability to provide health-related solutions, alongside contributing to policies surrounding STEM and ICTs, such that scientific, technological and policy developments are for social good, and are pushed to their full potential in promoting novel, equitable, affordable and universal healthcare, especially for marginalised communities. I will continue advocating these issues to young people, so we could together pave the way to a sustainable future.”//
