

**Words from Professor II (October 6, 2014)** Some of you ask me what the exam would be. Well, it consists of two parts. In Part A you are asked to answer some short questions. No lengthy proofs/computations are required. You are supposed to state the answer clearly and provide justifications (quoting certain theorems, etc). In Part B you have choice among some problems. Some proofs may be needed. To prepare for the midterm, you only need to go through the notes and exercises carefully.

I will be in my office 15:00-17:30 on this Thursday and 15:00-16:15 on next Monday. Do step in. Better make an appointment if you need more time.
