

Workshop series by the EAP Research Panel

WORKSHOP 4

Application of Multilevel Analysis in Understanding the Health Equity from an International Perspective

Speaker: Prof. Ho Sui Chu Esther

Department of Educational Administration and Policy

Date 23 June 2021 (Wed)

Time 12:00 nn - 1:30 pm

The workshop will be held via Zoom. The deadline for registration is 18 Jun (Fri). Zoom link will be provided to limited registrants through email. Limited quota on a first-come-first-served basis.

Content of the Workshop

This workshop will give participants an overview of the basics of multilevel analysis in examining the health equity issues using large scale international data such as PISA and HBSC. Preliminary findings of HBSC will shed light on the quality and equality of basic education in terms of a number of universal health indicators (such as the happiness index, self-rated health, physical and mental problems) in addition to the traditional cognitive outcomes (such as Reading, Mathematics and Science). I will show how nested data such as PISA, TIMSS and HBSC would be used to identify multilevel factors (such as student immigrant status, parental involvement, school climate, and so on..) related to the health indicators.

Participants: The workshop is intended to provide the opportunity for the doctoral students, young scholars and researchers to exchange research ideas with the expert researchers in and outside of The Chinese University of Hong Kong and to advance their thesis and research studies that can benefit the education community in Hong Kong and beyond.

All FOE members are welcome
