2 - Enhancing the Core Curriculum: A Blended Learning, Micro-Modular Approach

Tools / Services	Pedagogical Uses
ECHO360 Personal Capture enables user to carry out lecture recording in office by using one's notebook. It is a very easy to use tools but it does not allow video editing. Java Script and HTML5 are very popular tools for web applications development that are compatible with mobile devices as well as cross-browsers support on desktops. They are recommended and selected by ITSC.	The first module of my MMCD "Enhancing the Core Curriculum: A Blended Learning, Micro-Modular Approach" went live online (at http://www.cuhk.edu.hk/his/proj/csd/ CUHK Staff and Student users only) for students to undertake a paper review practice exercise online as part of their formal assessment. Although designed for first-year students of History at CUHK so as to boost fundamental skills of how History works module 1 was tested on an undergraduate elective programme The Industrial Revolution and its Impacts (HIST4341/5504). The micro-module offered an opportunity, firstly, to help develop core students skills within the context of the study of the Industrial Revolution, and secondly, to obtain as noted previously feedback on the design and working of the MMCDG.
