

# What is scientific literacy ?

Have the scientific knowledge & skills needed for everyday life.

Use the key ideas in science to make informed decisions & participate in society.

# Scientific competencies to be assessed in PISA

## Explaining Phenomena Scientifically

- Applying knowledge of science in a given situation.
- Describing or interpreting phenomena scientifically and predicting changes.
- Identifying appropriate descriptions, explanations, and predictions.

# Scientific competencies to be assessed in PISA

## Identifying Scientific Issues

- Recognising issues that it is possible to investigate scientifically.
- Identifying key words to search for scientific information.
- Recognising the key features of a scientific investigation.

# Scientific competencies to be assessed in PISA

## Using Scientific Evidence

- Interpreting scientific evidence and making and communicating conclusions.
- Identifying the assumptions, evidence and reasoning behind conclusions.
- Reflecting on the societal implications of science and technological developments.

# Distribution of science assessment items in PISA studies

About half of the scores are assigned to **Explaining phenomena scientifically**

- Knowledge **of** science

**Identifying scientific issues &  
Using scientific evidence**

- Knowledge **about** science

Questions based on realistic context

Closed items - MC & short-response Qs

Open-response questions

## PISA-2006

- a much larger no. of items
- greater emphasis on explaining phenomena scientifically

# Distribution of science assessment items in PISA studies

| Item format<br>Competency assessed  | PISA-2000    |            |                |         | PISA-2003    |            |                |         | PISA-2006    |            |                  |         |
|-------------------------------------|--------------|------------|----------------|---------|--------------|------------|----------------|---------|--------------|------------|------------------|---------|
|                                     | Closed items | Open items | Total          | % score | Closed items | Open items | Total          | % score | Closed items | Open items | Total            | % score |
| Explaining phenomena scientifically | 12 (13)      | 4 (4)      | 16 (17)        | 43      | 11 (11)      | 5 (6)      | 16 (17)        | 47      | 37 (37)      | 16 (16)    | 53 (53)          | 49      |
| Identifying scientific issues       | 6 (6)        | 3 (4)      | 9 (10)         | 26      | 4 (4)        | 3 (3)      | 7 (7)          | 20      | 20 (20)      | 5 (5)      | 25 (25)          | 23      |
| Using scientific evidence           | 5 (5)        | 5 (7)      | 10 (12)        | 31      | 6 (6)        | 5 (6)      | 11 (12)        | 33      | 16 (16)      | 15 (15)    | 31 (31)          | 28      |
|                                     | 23 (24)      | 12 (15)    | <u>35 (39)</u> |         | 21 (21)      | 13 (15)    | <u>34 (36)</u> |         | 73 (73)      | 36 (36)    | <u>109 (109)</u> |         |

# Distribution of performance on the science scale

Countries are ranked in descending order of mean score.

- Gradation bars extend from the 5th to the 95th percentiles
- Mean score on the science scale
- 95% confidence interval around the mean score

[Table 5.1.1, p. 8]

# Performance in different percentiles

Scientific literacy scores of students of OECD countries and Hong Kong in different ability ranges in PISA-2000

| Percentiles      | Hong Kong | OECD Countries | Difference in scores (HK – OECD) |
|------------------|-----------|----------------|----------------------------------|
| 5 <sup>th</sup>  | 391       | 332            | 59*                              |
| 10 <sup>th</sup> | 426       | 368            | 58*                              |
| 25 <sup>th</sup> | 488       | 431            | 57*                              |
| 50 <sup>th</sup> | 541       | 500            | 41*                              |
| 75 <sup>th</sup> | 600       | 572            | 28*                              |
| 90 <sup>th</sup> | 645       | 627            | 18*                              |
| 95 <sup>th</sup> | 671       | 657            | 14                               |

Mean scores of Hong Kong and OECD countries in scientific literacy at different percentiles in PISA-2000

Scientific literacy scores of students of OECD countries and Hong Kong in different ability ranges in PISA-2003

| Percentiles      | Hong Kong | OECD Countries | Difference in scores (HK – OECD) |
|------------------|-----------|----------------|----------------------------------|
| 5 <sup>th</sup>  | 373       | 324            | 49*                              |
| 10 <sup>th</sup> | 412       | 362            | 50*                              |
| 25 <sup>th</sup> | 478       | 427            | 51*                              |
| 50 <sup>th</sup> | 539       | 500            | 39*                              |
| 75 <sup>th</sup> | 608       | 575            | 33*                              |
| 90 <sup>th</sup> | 653       | 634            | 19*                              |
| 95 <sup>th</sup> | 680       | 668            | 12                               |

Mean scores of Hong Kong and OECD countries in scientific literacy at different percentiles in PISA-2003

Scientific literacy scores of students of OECD countries and Hong Kong in different ability ranges in PISA-2006

| Percentiles      | Hong Kong | OECD Countries | Difference in scores (HK – OECD) |
|------------------|-----------|----------------|----------------------------------|
| 5 <sup>th</sup>  | 380       | 340            | 40*                              |
| 10 <sup>th</sup> | 418       | 375            | 43*                              |
| 25 <sup>th</sup> | 482       | 434            | 47*                              |
| 50 <sup>th</sup> | 542       | 500            | 42*                              |
| 75 <sup>th</sup> | 609       | 568            | 41*                              |
| 90 <sup>th</sup> | 655       | 622            | 33*                              |
| 95 <sup>th</sup> | 682       | 652            | 30*                              |

Mean scores of Hong Kong and OECD countries in scientific literacy at different percentiles in PISA-2006

# Summary descriptions of 6 proficiency levels on the combined science scale

[Table 5.3.1, p. 11]

## Released science questions in PISA 2006 - illustrate proficiency levels

[Acid rain - p. 44]

Individuals with high skills (**Levels 5-6**) generate relatively large externalities in knowledge creation and utilisation, compared to an "average" individual - suggests that **investing in excellence may benefit all.**

**PISA, therefore, devotes significant attention to the assessment of students at the high end of the skill distribution.**

OECD average: 1.3% reach Level 6  
9.0% reach Level 5

Countries with large proportions of students in the highest two proficiency levels:

**Finland (20.9%), New Zealand (17.4%),  
Australia (14.9%), Japan (14.8%), HK (16.0%).**

These countries may be best placed to create a pool of talented scientists.

In contrast, countries with few students in the top two levels, may face future challenges in doing so.

Of the 57 countries, nearly half (26) have 5% or fewer of their 15-year-olds reaching Level 5 or Level 6.

6 countries have at least 15% (3x as many) with high science proficiency.

The no. of students at very low proficiency is also an important indicator - in terms of citizens' ability to participate fully in society and in the labour market. [Table 5.3.2, p.13]

# 溫總語特首 四方面加鞭

## 創新 知識 人才 環境

行政長官曾蔭權昨天在北京向國務院總理溫家寶述職時，溫家寶突然特別提到過去幾天訪問新加坡時，經常思考香港的競爭力問題，更即場提出四方面給曾蔭權參考，一是**創新**，包括**體制和科技創新**；二是**知識**，全民素質提高；三是**人才**；四是**環境**，不單要有好的法治環境，還要有好的生態環境。

曾蔭權在離京時向記者回應溫家寶的言論，說他完全認同總理的意見，值得香港深入思考。

[24-11-2007]

- Changes in scientific literacy across the 3 PISA studies?
- Difference in performance in different areas of competency across the 3 PISA studies?

|       |            |
|-------|------------|
| 2000+ | <b>541</b> |
| 2003  | <b>539</b> |
| 2006  | <b>542</b> |

[Table 5.2.1, p.9]

For 54 students,  
the overall increase in score is significant  
between PISA-2003 & PISA-2000 (25  
items) and between PISA-2006 & PISA-  
2003 (22 items)

**Comparison of performance in different  
areas of competency**

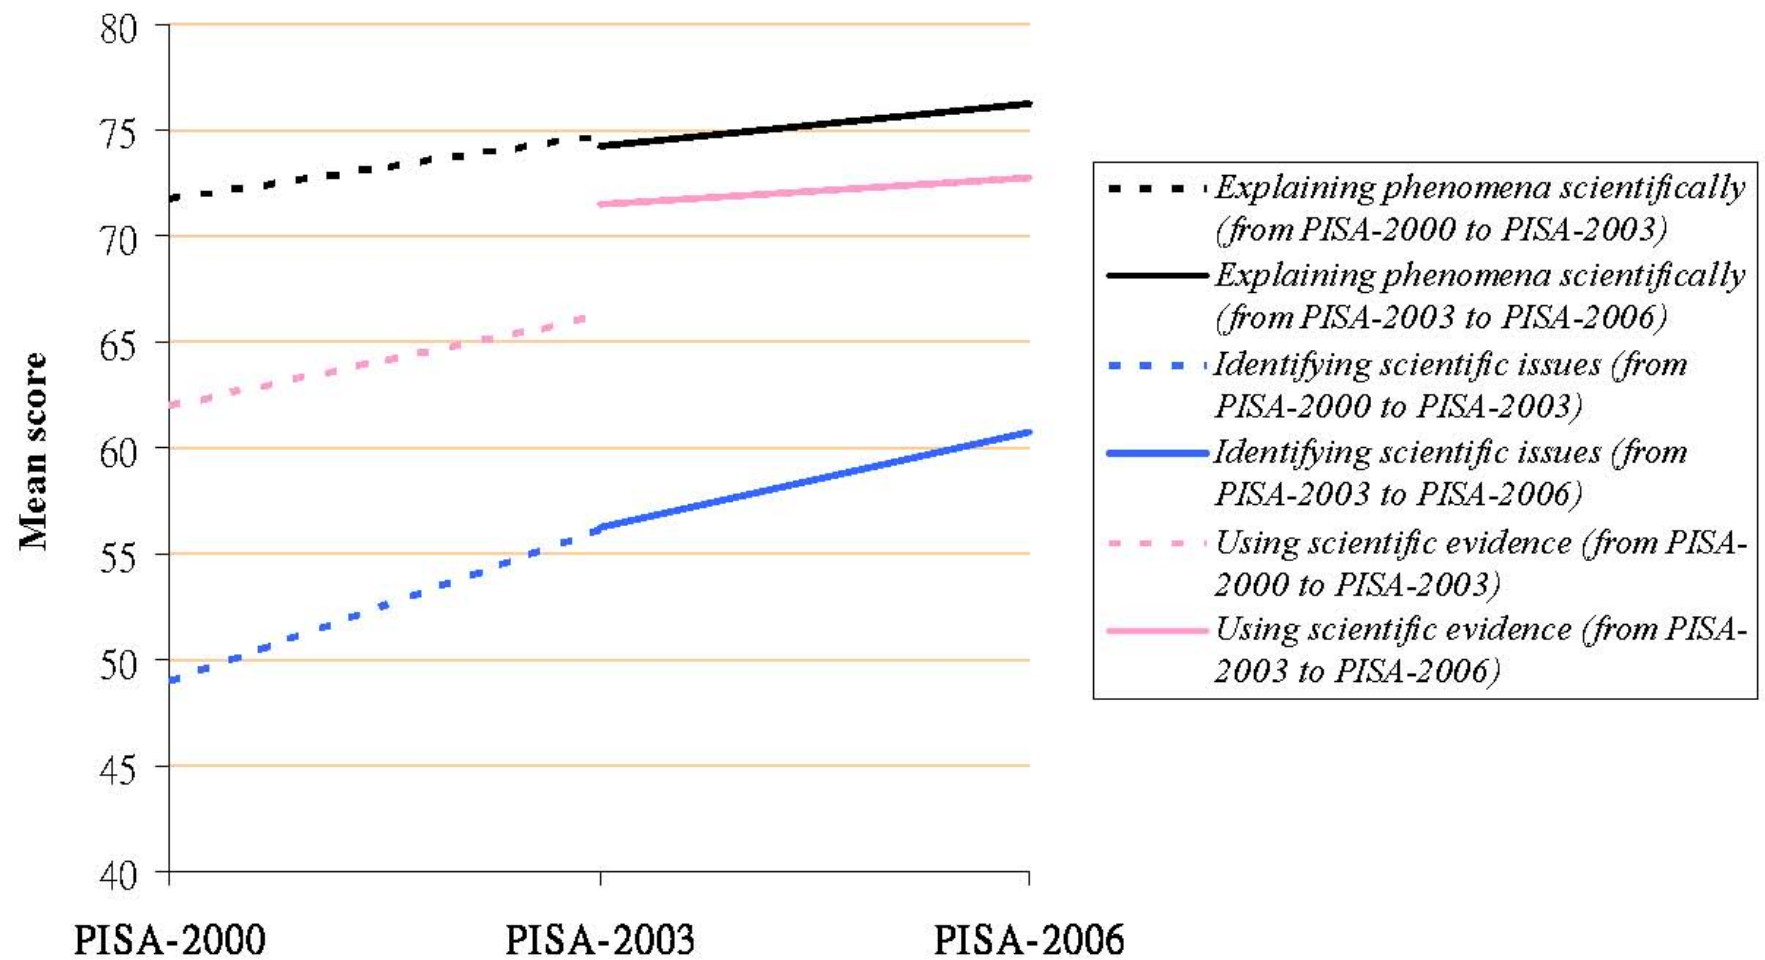

# Trend of changes in scientific literacy from PISA-2000 to PISA-2006

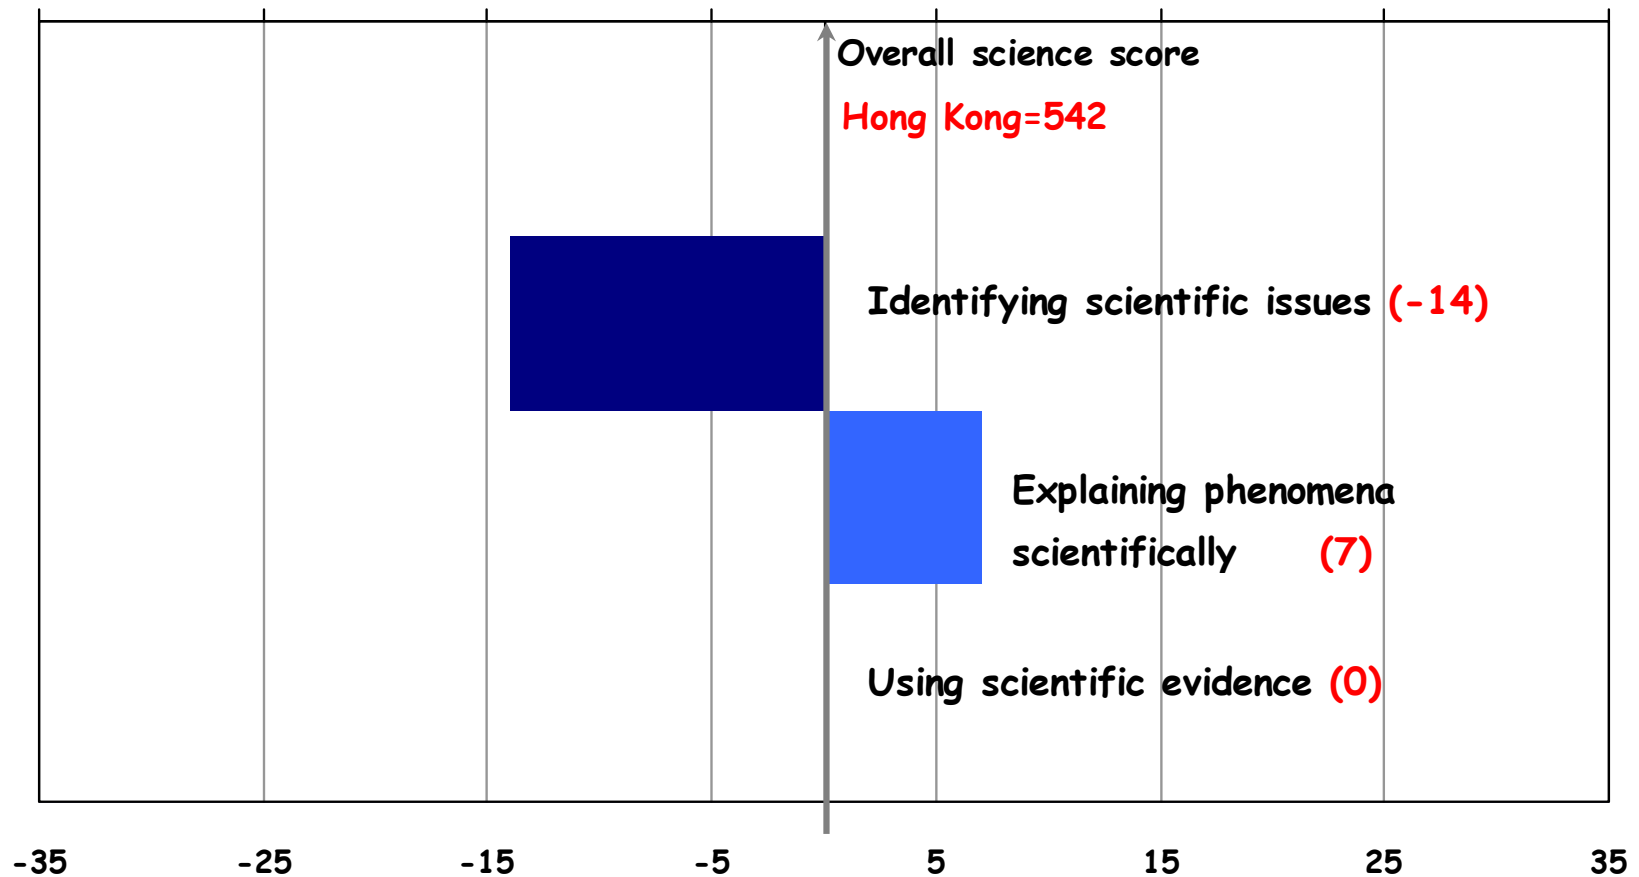

Figure 1

Mean scores of S4 students in different  
areas of competency between consecutive  
PISA studies

*Mean scores of S4 students in different areas of competency between consecutive PISA studies*

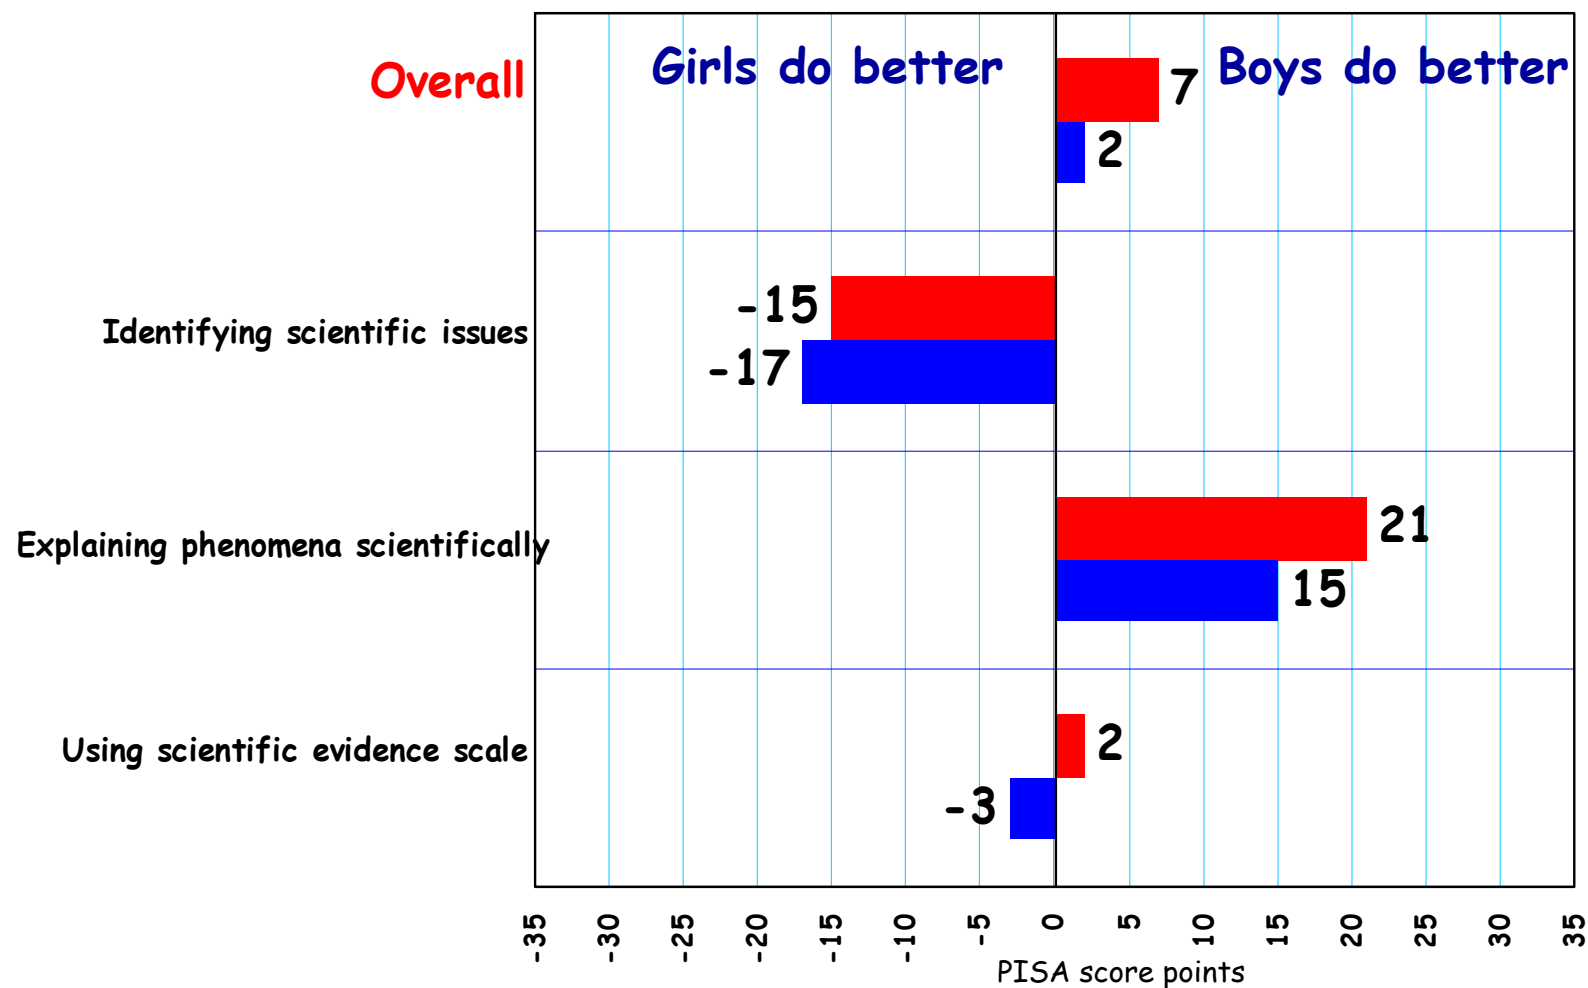

# Strengths and Weaknesses of Hong Kong students in science relative to their overall performance

# Gender differences in science performance

■ Hong Kong ■ OECD average

# Implications for the science curriculum

Hong Kong is consistently among the best-performing regions in science

Curriculum emphasis on **knowledge of science** and **knowledge about science**

Good support on science teaching, including lab facilities

A team of committed, professional science teachers

Weaker performance on identifying scientific issues

⇒ Analysing historical examples or current issues ⇒ Nature of science

Emphasis of NSS science curriculum

# How to reduce the gap in learning and assessment of science between MOI?

- \* EMI facilitates the development of proficiency in English (a 2nd language)
- \* Disadvantage in learning & assessment for EMI students

## Research informing practice:

- Matching English proficiency to cognitive demand of the curriculum

- Teaching strategies:

- Active reading & writing strategies
- Use of analogies, models & A-V aids
- Making language of science intelligible

How do our students feel about their own competencies in science?

Impact on their performance, careers & economic development of society?
