The Jacobian of the transformation, again from Equations (9), is

$$J(u, v, w) = \begin{vmatrix} \frac{\partial x}{\partial u} & \frac{\partial x}{\partial v} & \frac{\partial x}{\partial w} \\ \frac{\partial y}{\partial u} & \frac{\partial y}{\partial v} & \frac{\partial y}{\partial w} \\ \frac{\partial z}{\partial u} & \frac{\partial z}{\partial v} & \frac{\partial z}{\partial w} \end{vmatrix} = \begin{vmatrix} 1 & 1 & 0 \\ 0 & 2 & 0 \\ 0 & 0 & 3 \end{vmatrix} = 6.$$

We now have everything we need to apply Equation (7):

$$\int_{0}^{3} \int_{0}^{4} \int_{x=y/2}^{x=(y/2)+1} \left(\frac{2x-y}{2} + \frac{z}{3}\right) dx \, dy \, dz$$

$$= \int_{0}^{1} \int_{0}^{2} \int_{0}^{1} (u+w) |J(u,v,w)| \, du \, dv \, dw$$

$$= \int_{0}^{1} \int_{0}^{2} \int_{0}^{1} (u+w)(6) \, du \, dv \, dw = 6 \int_{0}^{1} \int_{0}^{2} \left[\frac{u^{2}}{2} + uw\right]_{0}^{1} dv \, dw$$

$$= 6 \int_{0}^{1} \int_{0}^{2} \left(\frac{1}{2} + w\right) dv \, dw = 6 \int_{0}^{1} \left[\frac{v}{2} + vw\right]_{0}^{2} dw = 6 \int_{0}^{1} (1+2w) \, dw$$

$$= 6 \left[w + w^{2}\right]_{0}^{1} = 6(2) = 12.$$

Exercises 15.8

Jacobians and Transformed Regions in the Plane

1. a. Solve the system

$$u=x-y, \qquad v=2x+y$$

for x and y in terms of u and v. Then find the value of the Jacobian $\partial(x, y)/\partial(u, v)$.

- **b.** Find the image under the transformation u = x y, v = 2x + y of the triangular region with vertices (0, 0), (1, 1), and (1, -2) in the xy-plane. Sketch the transformed region in the uv-plane.
- 2. a. Solve the system

$$u = x + 2y, \qquad v = x - y$$

for x and y in terms of u and v. Then find the value of the Jacobian $\partial(x, y)/\partial(u, v)$.

- **b.** Find the image under the transformation u = x + 2y, v = x y of the triangular region in the xy-plane bounded by the lines y = 0, y = x, and x + 2y = 2. Sketch the transformed region in the uv-plane.
- 3. a. Solve the system

$$u = 3x + 2y, \qquad v = x + 4y$$

for x and y in terms of u and v. Then find the value of the Jacobian $\partial(x, y)/\partial(u, v)$.

b. Find the image under the transformation u = 3x + 2y, v = x + 4y of the triangular region in the xy-plane bounded

by the x-axis, the y-axis, and the line x + y = 1. Sketch the transformed region in the uv-plane.

4. a. Solve the system

$$u = 2x - 3y, \qquad v = -x + y$$

for x and y in terms of u and v. Then find the value of the Jacobian $\partial(x, y)/\partial(u, v)$.

b. Find the image under the transformation u = 2x - 3y, v = -x + y of the parallelogram R in the xy-plane with boundaries x = -3, x = 0, y = x, and y = x + 1. Sketch the transformed region in the uv-plane.

Substitutions in Double Integrals

5. Evaluate the integral

$$\int_0^4 \int_{x=y/2}^{x=(y/2)+1} \frac{2x-y}{2} dx \, dy$$

from Example 1 directly by integration with respect to x and y to confirm that its value is 2.

6. Use the transformation in Exercise 1 to evaluate the integral

$$\iint\limits_{\mathbb{R}} (2x^2 - xy - y^2) \, dx \, dy$$

for the region R in the first quadrant bounded by the lines y = -2x + 4, y = -2x + 7, y = x - 2, and y = x + 1.

945

$$\iint_{\mathcal{D}} (3x^2 + 14xy + 8y^2) \, dx \, dy$$

for the region R in the first quadrant bounded by the lines y = -(3/2)x + 1, y = -(3/2)x + 3, y = -(1/4)x, and y = -(1/4)x + 1.

8. Use the transformation and parallelogram R in Exercise 4 to evaluate the integral

$$\iint\limits_{\mathbb{R}} 2(x-y)\,dx\,dy.$$

9. Let R be the region in the first quadrant of the xy-plane bounded by the hyperbolas xy = 1, xy = 9 and the lines y = x, y = 4x. Use the transformation x = u/v, y = uv with u > 0 and v > 0 to rewrite

$$\iint\limits_{\mathcal{D}} \left(\sqrt{\frac{y}{x}} + \sqrt{xy} \right) dx \, dy$$

as an integral over an appropriate region G in the uv-plane. Then evaluate the uv-integral over G.

- 10. a. Find the Jacobian of the transformation x = u, y = uv and sketch the region $G: 1 \le u \le 2$, $1 \le uv \le 2$, in the uv-plane.
 - b. Then use Equation (2) to transform the integral

$$\int_{1}^{2} \int_{1}^{2} \frac{y}{x} dy dx$$

into an integral over G, and evaluate both integrals.

- 11. Polar moment of inertia of an elliptical plate A thin plate of constant density covers the region bounded by the ellipse $x^2/a^2 + y^2/b^2 = 1$, a > 0, b > 0, in the xy-plane. Find the first moment of the plate about the origin. (Hint: Use the transformation $x = ar \cos \theta$, $y = br \sin \theta$.)
- 12. The area of an ellipse The area πab of the ellipse $x^2/a^2 + y^2/b^2 = 1$ can be found by integrating the function f(x, y) = 1 over the region bounded by the ellipse in the xy-plane. Evaluating the integral directly requires a trigonometric substitution. An easier way to evaluate the integral is to use the transformation x = au, y = bv and evaluate the transformed integral over the disk $G: u^2 + v^2 \le 1$ in the uv-plane. Find the area this way.
- 13. Use the transformation in Exercise 2 to evaluate the integral

$$\int_0^{2/3} \int_y^{2-2y} (x+2y)e^{(y-x)} \, dx \, dy$$

by first writing it as an integral over a region G in the uv-plane.

14. Use the transformation x = u + (1/2)v, y = v to evaluate the integral

$$\int_{0}^{2} \int_{y/2}^{(y+4)/2} y^{3}(2x-y)e^{(2x-y)^{2}} dx dy$$

by first writing it as an integral over a region G in the uv-plane.

15. Use the transformation x = u/v, y = uv to evaluate the integral sum

$$\int_{1}^{2} \int_{1/y}^{y} (x^{2} + y^{2}) dx dy + \int_{2}^{4} \int_{y/4}^{4/y} (x^{2} + y^{2}) dx dy.$$

16. Use the transformation $x = u^2 - v^2$, y = 2uv to evaluate the integral

$$\int_0^1 \int_0^{2\sqrt{1-x}} \sqrt{x^2 + y^2} \, dy \, dx.$$

(*Hint:* Show that the image of the triangular region G with vertices (0,0), (1,0), (1,1) in the uv-plane is the region of integration R in the xy-plane defined by the limits of integration.)

Substitutions in Triple Integrals

- 17. Evaluate the integral in Example 5 by integrating with respect to x, y, and z.
- 18. Volume of an ellipsoid Find the volume of the ellipsoid

$$\frac{x^2}{a^2} + \frac{y^2}{b^2} + \frac{z^2}{c^2} = 1.$$

(*Hint*: Let x = au, y = bv, and z = cw. Then find the volume of an appropriate region in uvw-space.)

19. Evaluate

$$\iiint |xyz| dx dy dz$$

over the solid ellipsoid

$$\frac{x^2}{a^2} + \frac{y^2}{b^2} + \frac{z^2}{c^2} \le 1.$$

(*Hint*: Let x = au, y = bv, and z = cw. Then integrate over an appropriate region in uvw-space.)

20. Let D be the region in xyz-space defined by the inequalities

$$1 \le x \le 2$$
, $0 \le xy \le 2$, $0 \le z \le 1$.

Evaluate

$$\iiint\limits_{D} (x^2y + 3xyz) dx dy dz$$

by applying the transformation

$$u = x$$
, $v = xy$, $w = 3z$

and integrating over an appropriate region G in uvw-space.

Theory and Examples

21. Find the Jacobian $\partial(x, y)/\partial(u, v)$ of the transformation

a.
$$x = u \cos v$$
, $y = u \sin v$

b.
$$x = u \sin v$$
, $y = u \cos v$.

22. Find the Jacobian $\partial(x, y, z)/\partial(u, v, w)$ of the transformation

a.
$$x = u \cos v$$
, $y = u \sin v$, $z = w$

b.
$$x = 2u - 1$$
, $y = 3v - 4$, $z = (1/2)(w - 4)$.

- 23. Evaluate the appropriate determinant to show that the Jacobian of the transformation from Cartesian $\rho\phi\theta$ -space to Cartesian xyzspace is $\rho^2 \sin \phi$.
- 24. Substitutions in single integrals How can substitutions in single definite integrals be viewed as transformations of regions? What is the Jacobian in such a case? Illustrate with an example.
- 25. Centroid of a solid semiellipsoid Assuming the result that the centroid of a solid hemisphere lies on the axis of symmetry threeeighths of the way from the base toward the top, show, by transforming the appropriate integrals, that the center of mass of a solid semiellipsoid $(x^2/a^2) + (y^2/b^2) + (z^2/c^2) \le 1$, $z \ge 0$, lies on the z-axis three-eighths of the way from the base toward the top. (You can do this without evaluating any of the integrals.)
- 26. Cylindrical shells In Section 6.2, we learned how to find the volume of a solid of revolution using the shell method; namely, if the region between the curve y = f(x) and the x-axis from a to b (0 < a < b) is revolved about the y-axis, the volume of the resulting solid is $\int_a^b 2\pi x f(x) dx$. Prove that finding volumes by

- using triple integrals gives the same result. (Hint: Use cylindrical coordinates with the roles of y and z changed.)
- 27. Inverse transform The equations x = g(u, v), y = h(u, v) in Figure 15.54 transform the region G in the uv-plane into the region R in the xy-plane. Since the substitution transformation is one-to-one with continuous first partial derivatives, it has an inverse transformation and there are equations $u = \alpha(x, y)$. $v = \beta(x, y)$ with continuous first partial derivatives transforming R back into G. Moreover, the Jacobian determinants of the transformations are related reciprocally by

$$\frac{\partial(x, y)}{\partial(u, v)} = \left(\frac{\partial(u, v)}{\partial(x, y)}\right)^{-1}.$$
 (10)

Equation (10) is proved in advanced calculus. Use it to find the area of the region R in the first quadrant of the xy-plane bounded by the lines y = 2x, 2y = x, and the curves xy = 2, 2xy = 1 for u = xy and v = y/x.

28. (Continuation of Exercise 27.) For the region R described in Exercise 27, evaluate the integral $\iint_R y^2 dA$.

Chapter 15 **Questions to Guide Your Review**

- 1. Define the double integral of a function of two variables over a bounded region in the coordinate plane.
- 2. How are double integrals evaluated as iterated integrals? Does the order of integration matter? How are the limits of integration determined? Give examples.
- 3. How are double integrals used to calculate areas and average values. Give examples.
- 4. How can you change a double integral in rectangular coordinates into a double integral in polar coordinates? Why might it be worthwhile to do so? Give an example.
- 5. Define the triple integral of a function f(x, y, z) over a bounded region in space.
- 6. How are triple integrals in rectangular coordinates evaluated? How are the limits of integration determined? Give an example.

- 7. How are double and triple integrals in rectangular coordinates used to calculate volumes, average values, masses, moments, and centers of mass? Give examples.
- 8. How are triple integrals defined in cylindrical and spherical coordinates? Why might one prefer working in one of these coordinate systems to working in rectangular coordinates?
- 9. How are triple integrals in cylindrical and spherical coordinates evaluated? How are the limits of integration found? Give examples.
- 10. How are substitutions in double integrals pictured as transformations of two-dimensional regions? Give a sample calculation.
- 11. How are substitutions in triple integrals pictured as transformations of three-dimensional regions? Give a sample calculation.

Chapter 15 Practice Exercises

Evaluating Double Iterated Integrals

In Exercises 1-4, sketch the region of integration and evaluate the double integral.

1.
$$\int_{1}^{10} \int_{0}^{1/y} y e^{xy} dx dy$$
 2. $\int_{0}^{1} \int_{0}^{x^{3}} e^{y/x} dy dx$

2.
$$\int_{0}^{1} \int_{0}^{x^{3}} e^{y/x} dy dx$$

3.
$$\int_{0}^{3/2} \int_{-\sqrt{9-4t^2}}^{\sqrt{9-4t^2}} t \, ds \, dt$$
 4.
$$\int_{0}^{1} \int_{\sqrt{y}}^{2-\sqrt{y}} xy \, dx \, dy$$

4.
$$\int_{0}^{1} \int_{\sqrt{y}}^{2-\sqrt{y}} xy \, dx \, dy$$

In Exercises 5-8, sketch the region of integration and write an equivalent integral with the order of integration reversed. Then evaluate both integrals.

$$5. \int_0^4 \int_{-\sqrt{4-y}}^{(y-4)/2} dx \, dy$$

6.
$$\int_{0}^{1} \int_{x^{2}}^{x} \sqrt{x} \, dy \, dx$$

7.
$$\int_0^{3/2} \int_{-\sqrt{9-4y^2}}^{\sqrt{9-4y^2}} y \, dx \, dy$$
 8.
$$\int_0^2 \int_0^{4-x^2} 2x \, dy \, dx$$

8.
$$\int_0^2 \int_0^{4-x^2} 2x \, dy \, dx$$
