# Primary Care Needs of Older People in the Community: a Hong Kong Solution

**Professor EK Yeoh**

Director, JC School of Public Health and Primary Care

Faculty of Medicine

The Chinese University of Hong Kong

*13 January 2020*

# A Fit for Purpose Health System

- **A system suited to accomplish its intended purpose**

- **Changing in a changing world:**

**Changing context:**
- An ageing population
- Prevalence of preventable chronic illness and loss of capacity
- Influenced by the social determinants of health

**Changing needs:**
- Physical, mental, social and spiritual health needs
- Across the life course

**Changing knowledge & technology:**
- New medical knowledge, medical technology, information and communications technology
- Disrupting conventional models of care

# Hong Kong's Changing Context

**Number of chronic diseases among inpatients, by age group, in the public sector in year 2004 and 2014**

Number of chronic diseases in in-patients by age in 2004

Number of chronic diseases in in-patients by age in 2014

■ 6 diseases  ■ 5 diseases  ■ 4 diseases  ■ 3 diseases
■ 2 diseases  ■ 1 disease  □ No diseases

# Hong Kong's Challenges

- **Longer living populations**
- Prevalence of **preventable chronic conditions**
- **Lifestyle-related and socially determined**
- Fundamental **mismatch between services**
- **Shifting demand profile** necessitates a whole-of-society and life course approach

- **Fragmentation and segmentation**
  - Primary and hospital services
  - Personal and population health services
  - Long-term and community care
  - Public and private sectors
- **Advances in:**
  - **Medical knowledge and technologies** information and communication technology
- New opportunities while **disrupting current healthcare provision and financing models**

# Among all Hospital Admissions for Hong Kong Elderly, 65+

15% RCHE vs 85% home

46.8% due to ambulatory care sensitive conditions (ACSC)*

4% result in death in hosp.

About 20% avoidable readmission in 30days

Segmentation of Health and Social Systems

*ACSC: Conditions in which hospitalization can be avoided by timely and effective care in ambulatory settings
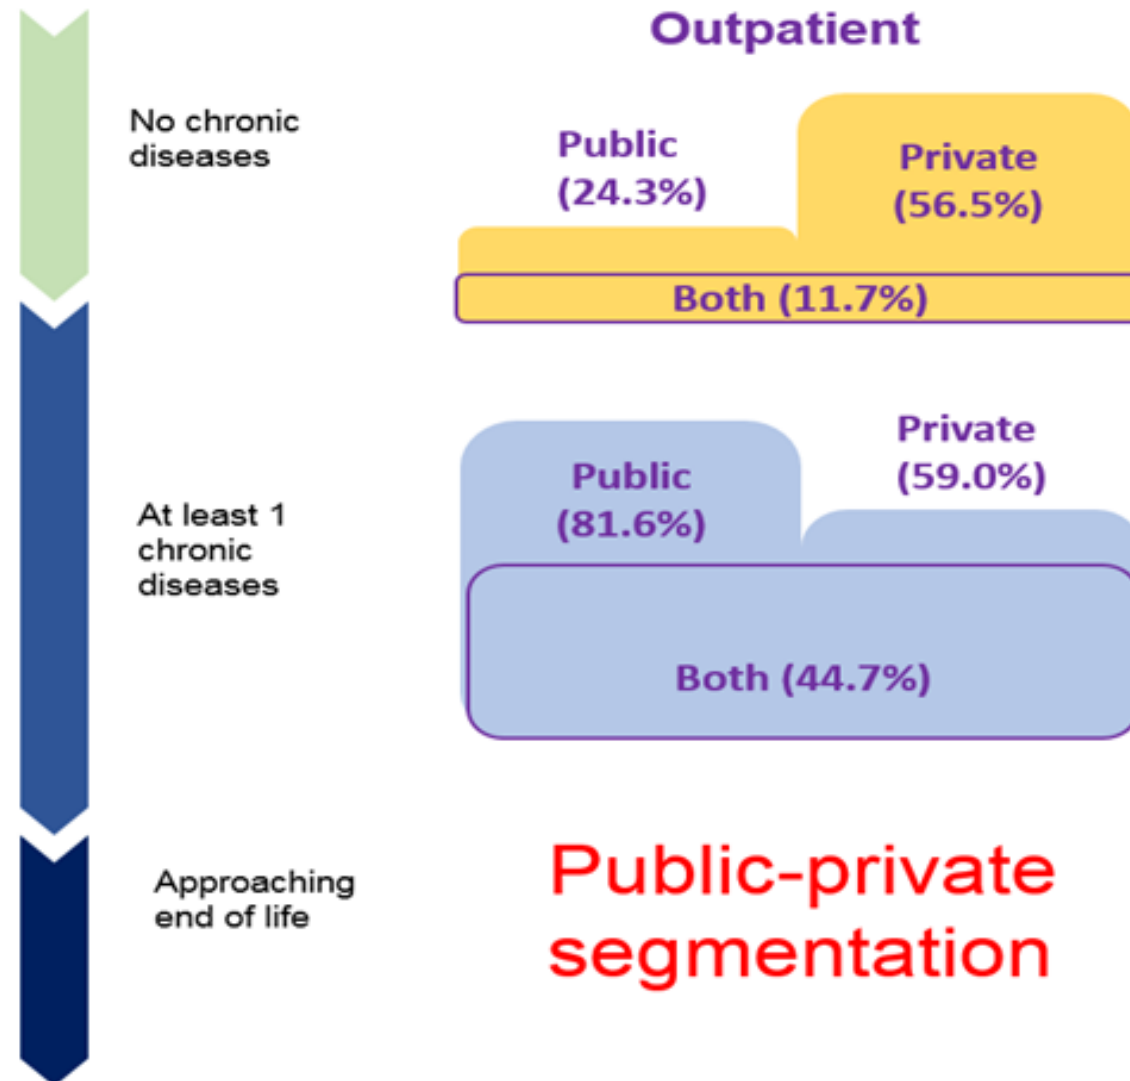

Source: Yeoh, 2018

# Patterns of Seeking Outpatient Care in Hong Kong

Source: Yeoh, 2018

# Profile of Long Term Care Applicants

Standardised Care Need Assessment Mechanism for Elderly Services (SCNAMES)

Over 23,000 Applicants

60% Female    40% Male

78% with a primary school education level and below

99% made no trade-offs between health/social care services and daily life expenses

AVERAGE AGE
82.4

Health Characteristics of LTC Applicants

**84.4% matched into Dual Option**
- 3.27 avg. no. chronic conditions.
- 70% HT & 31% DM.
- 99% IADL needs & 70% ADL needs.
- 2x more likely to suffer from anxiety and depression than nonusers.

**7.9% No Service Group**
- 2.83 avg. no. chronic conditions.
- 70% HT & 31% DM.
- 70% IADL needs & 31% ADL needs.
- Nearly 2x more likely to be at risk of experiencing a fall than those matched

**1.4% matched into Community Care (CCS)**
- 3.55 avg. no. chronic conditions.
- 73% HT & 36% DM.
- 99% IADL needs & 85% ADL needs.
- 87% used scheduled GP services.

**6.3% matched into Residential Care (RCS)**
- 3.62 avg. no. chronic conditions.
- 73% HT & 30% DM.
- 98% IADL needs & 67% ADL needs.
- 12% used unscheduled medical services (including A&E).
- 2.2x more likely to use unscheduled medical services vs. no service group.
- More chronic conditions, higher mental and functional health needs than no service group.

Source: Our Hong Kong Foundation

# Challenge 2: Fragmentation and Segmentation

*Delivery system fragmentation*

➢ Different **types of care**

➢ Different **settings and organisations**

➢ Different service **providers**

➢ Various **processes**

- "Natural fissure lines" contributing to care fragmentation in a life course

*Health system segmentation*

➢ Segmentation of **service delivery and financing** between public and private sectors.

➢ **Public-private** divide

*Health and social sector segmentation*

➢ Segmentation of **service and finance of health social sector**

➢ Hinder **transition** along patient care pathways & **inadequate medical and social support**

香港中文大學
The Chinese University of Hong Kong

CU Medicine
香港中文大學醫學院
Faculty of Medicine
The Chinese University of Hong Kong

# Challenge 3: Primary Care
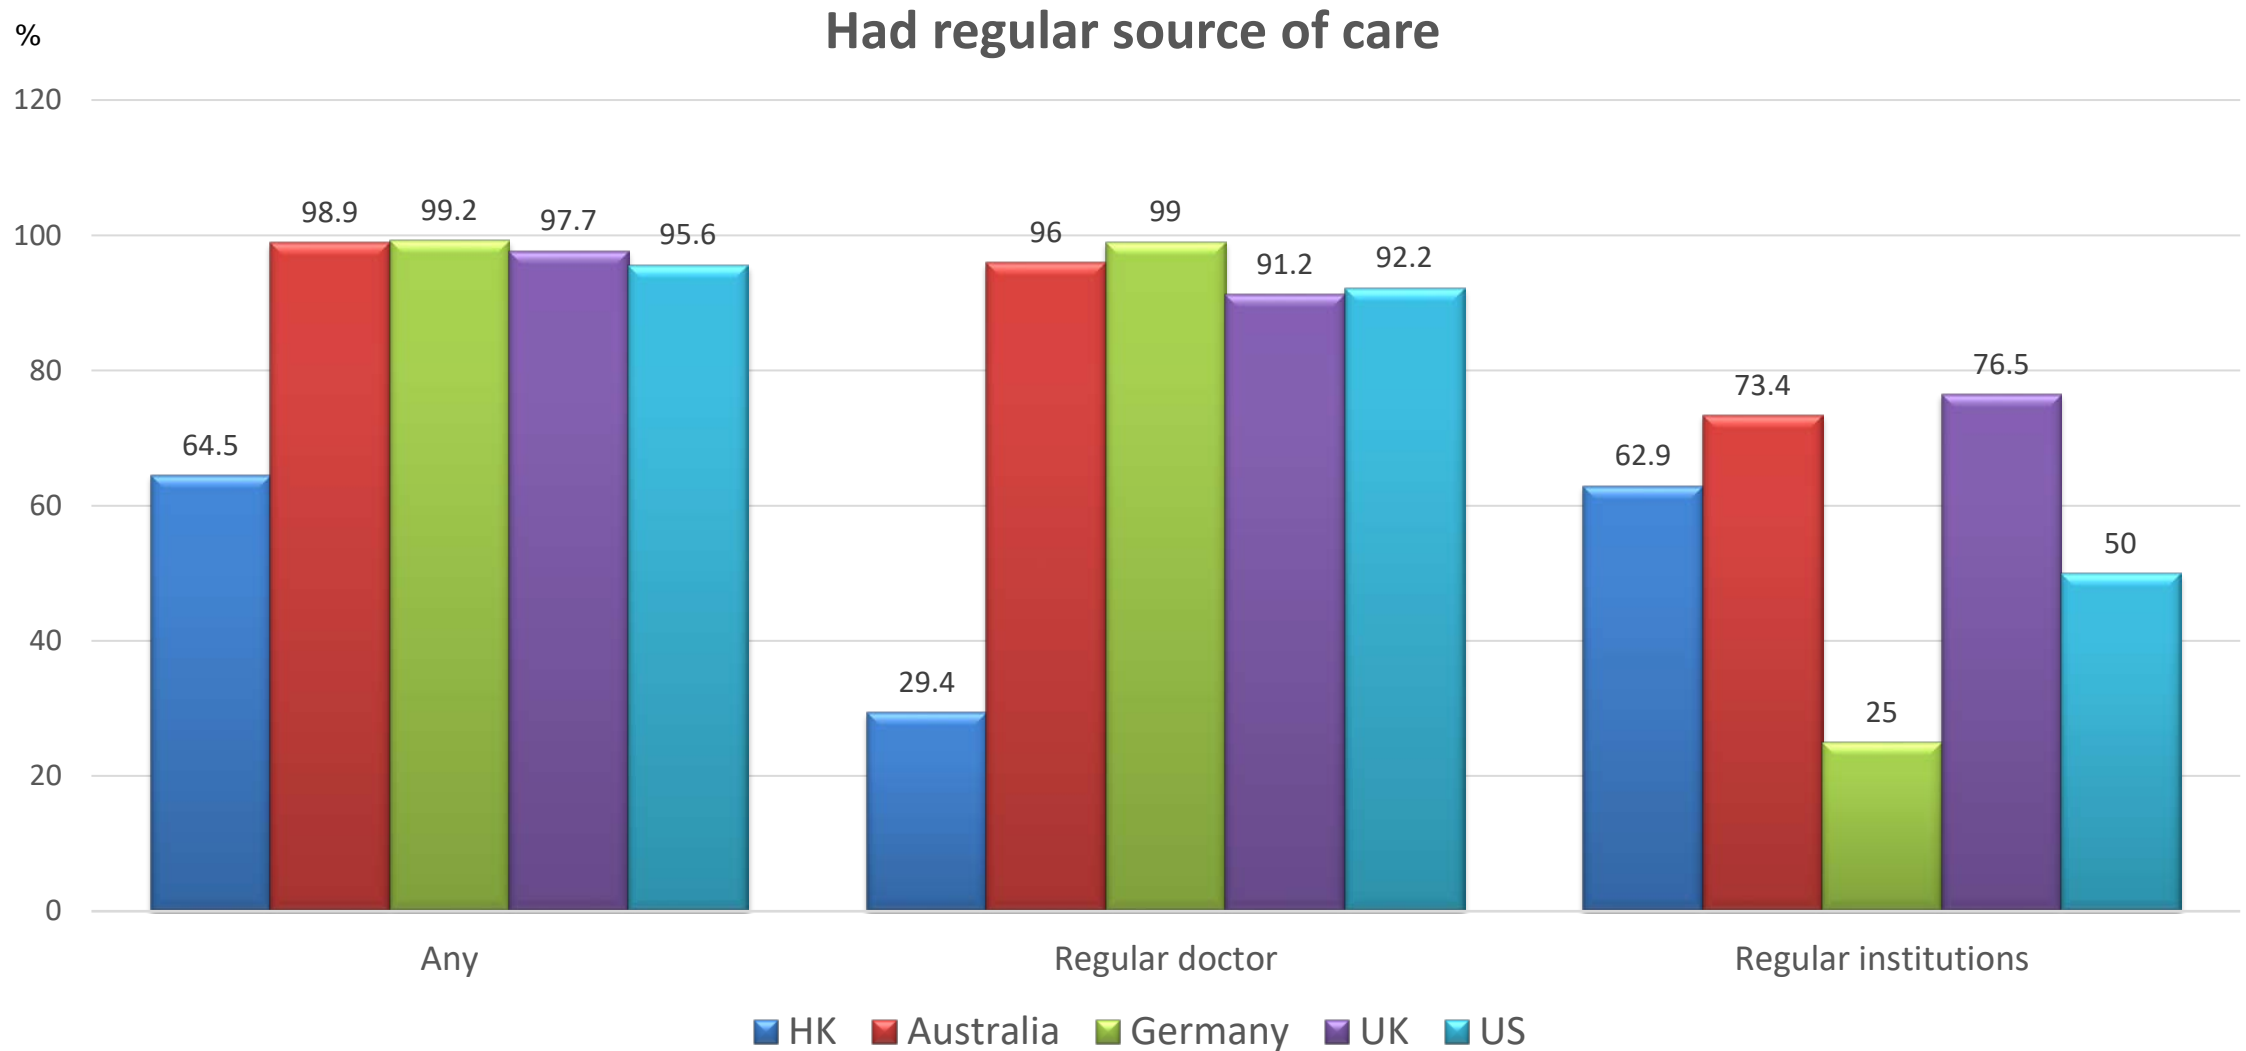

**The primary care system is underdeveloped.**

➤ Primary care in the private sector is *unaffordable* for certain segments of the population

➤ *Underdeveloped* primary care contributes to:

- System fragmentation
- Service delivery inefficiency
  - Encourages patients to access specialist and acute services
  - Overspecialization results in multiple healthcare providers within a single patient care pathway contributing to fragmentation
  - Serial referrals to different specialists can lead to service overlap, gaps in service delivery, longer wait times and inefficiency

# From Challenges to Opportunities for Change

The **challenges** we face:

➢ Demographic change (Ageing populations)
➢ Preventable chronic illnesses
➢ Technological change

**3 components to change**:

1. Patient-centred
2. Integrated care
3. Primary care-led

Enabled by
**Health Governance and Leadership**

香港中文大學
The Chinese University of Hong Kong

CU Medicine HONG KONG
香港中文大學醫學院

# Transforming the System to be Fit for Purpose

## Person-centred Care
- **We need to reorient the health system for "the community of persons".**

## Primary Care-led Integrated Care
- **We need to reorganise how services are delivered to strengthen integration within and between providers and sectors.**

## Health Governance
- **We need to put in place governance levers and structures to support and enable the development of new service models.**

香港中文大學

The Chinese University of Hong Kong

# Person-centred Care

***Positioning the patient as the*** *<span style="color:blue">"Integrator of services"</span>* ***in a person health journey over the life course.***

- ***Enable*** *<span style="color:blue">"person health pathways"</span>*
  - **"Patient portal"** Electronic Health Record Sharing System empowers patients to monitor health, integrating health promotion, disease prevention and care process, and enabling coproduction of health
  - Online functions information to help people remain healthy
  - Services coordinated across different care settings and service providers
  - Enable patients and caregivers to become integrators of their own care
  - Telehealth services
  - Apps and 24-hour triage hotlines help people
    - make informed healthcare choices
    - managing health provider appointments
    - virtual consultations
  - Capitalize on the opportunities afforded by big data and AI
  - Further development of information networks and platforms

# Primary Care-led Integrated Care

## *Strengthen health services integration through new models of care.*

| Conceptual Model of Integrated Health Services |
|---|
| 1. **Designing care across the life course,** care pathways are tailored for the holistic physical, social and spiritual needs of individuals throughout the life course |
| 2. **Organising providers and settings**:<br>• coordination for smooth transition throughout the care pathway<br>• population and personal health functions need to be integrated |
| 3. **Managerial processes must be in place.**<br>crucial for sustainability focus on:<br>  – efficiency and effectiveness<br>  – mechanisms for monitoring, evaluation, review and renewal of current service models |
| 4. **Clinical governance**<br>• strengthened to monitor and evaluate how care is being coordinated to meet holistic needs of patients.<br>• assessment of care needs, and discharge planning<br>• service or care pathways, facilitate the delivery of a continuum of care needed across settings and provider transitions |

# Primary Care-led Integrated Care

***Accelerate the*** *pace of primary care development* ***in Hong Kong.***

1. **Primary Care**

   - ***Comprehensive*** to address holistic needs
   - ***Coordinated*** across different care providers and service settings
   - ***Continuous*** to cater for needs across the life course
   - ***Accessible*** for patients to initiate necessary interactions with health service providers
   - ***Quality assurance***

2. **Scaled up for:**

   - Population approach of chronic disease management
   - Health promotion & prevention

香港中文大學
The Chinese University of Hong Kong

CU Medicine
香港中文大學醫學院
Faculty of Medicine
The Chinese University of Hong Kong

# Primary Care-led Integrated Care

***Urgent need to*** *build up a primary care workforce.*

- Enable '**patient affiliation with a primary care doctor**'

- Family doctors

- Generalists trained to deal with multiple chronic illnesses, and ageing-related complications such as decreasing reserves and capacity manifesting as fragility

- Primary care doctors trained to provide long-term & palliative care, care for the disabled

- "Specialists" who provide primary care. 50% of doctors in primary care

- Nursing, allied health professions, social workers & community health work force

- **Multidisciplinary** and **quality assurance**

# Conceptual Model for Integrated Community Medical-social Services for the Care of Older People in Hong Kong

Source: The Jockey Club School of Public Health and Primary Care, 2017; OHKF, 2016

# Integrated Model Between A&E and Geriatric

**A&E Department**

56.5% (341,120 attendances) hospitalized

**Hospitalization**

92.1% (6,046,561 attendances) aged 65+, triage category 3 or 4

**Integrated Model A&E Diversion**

50% hospitalized (170,560 attendances)

**Home**

50% of hospitalized avoided (170,560 attendances)
Discharge with community support
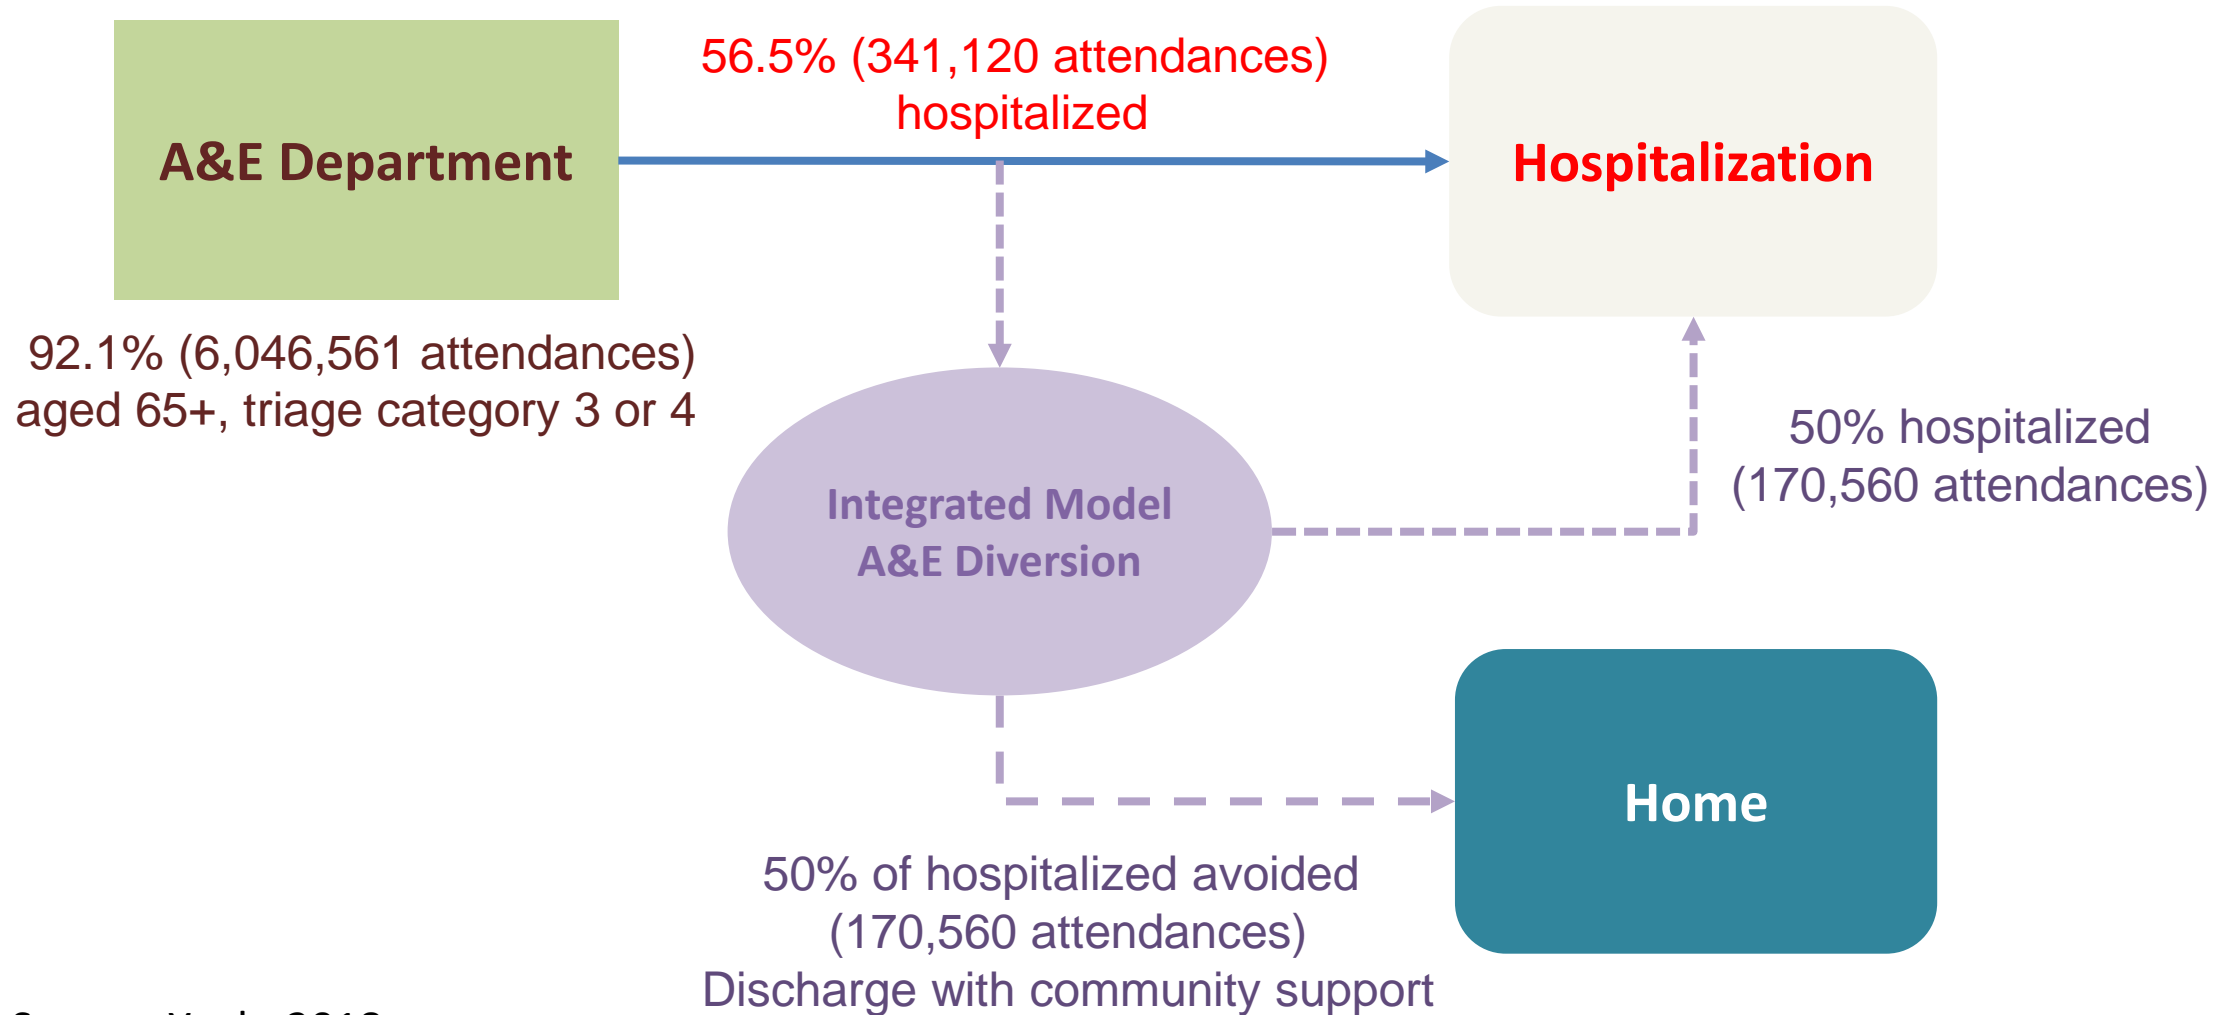

Source: Yeoh, 2018

# Primary Care-led Integrated Care

***Medical and social care integration.***

- Adequate medical and nursing *support for desirable health outcomes*, adequate *funding, resources and infrastructure* need to be available for social care

- *Scale up social support* for chronically ill, frail elderly and patients discharged back into the community

- Study funding needs and *shared funding mechanisms* where health and social care authorities enter *pooled budget arrangements* and agree on integrated spending plan

香港中文大學
The Chinese University of Hong Kong

CU Medicine HONG KONG
香港中文大學醫學院
Faculty of Medicine
The Chinese University of Hong Kong

# Primary Care-led Integrated Care

***Re-evaluation of the*** *strategic complementary role* ***of the private sector.***

The role of the private sector in primary care, chronic disease management, long-term care and for defined population groups should be studied and redefined to enable a more strategic role to emerge.

# DHCs in building coherence in the local PHC ecosystem

| Community Responsibilities | |
|---|---|
| Identification of needs (including target groups and special needs) | -Working with key stakeholder groups and community partners and groups to develop comprehensive community diagnosis (e.g., needs assessment) and review and update regularly |
| Development of action programmes | -Working with the local community to decide on priority of health development issues and design intervention programmes with evaluation in response to the needs identified in community diagnosis |
| Surveillance for equity | -Working with local community groups to improve access for those who are known to have difficulties accessing service |
| Intersectoral collaboration | -Working with FHB to ensure local health development strategies are aligned with the overarching policies, and in parallel making sure local health needs are made known to the FHB to improve relevance of future policies to the local district population<br>-Involving other sectors outside of health in the designing, planning and implementation of community health development (innovative approaches)<br>-Involving non-public sectors to think about new approaches to financially sustain health development (e.g., PPP) |
| Community participation | -Involving local people in the organization and delivery of healthcare |
