

Lay-Net: Grafting Netlist Knowledge on Layout-Based Congestion Prediction

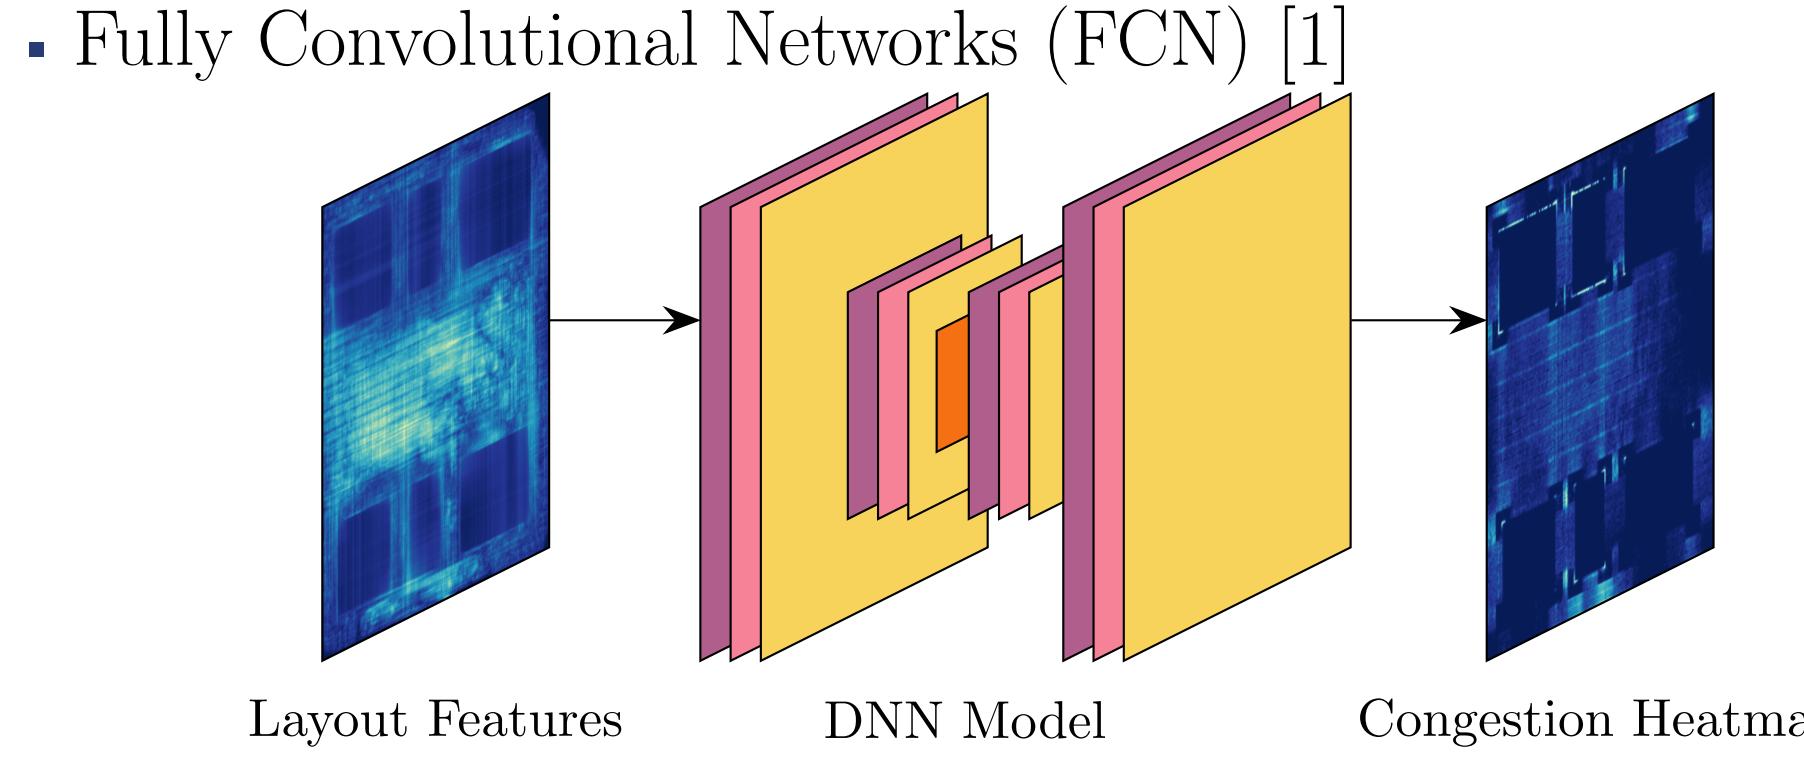

Su Zheng¹, Lancheng Zou², Peng Xu¹, Siting Liu¹, Bei Yu¹, Martin Wong¹

¹The Chinese University of Hong Kong
²Wuhan University

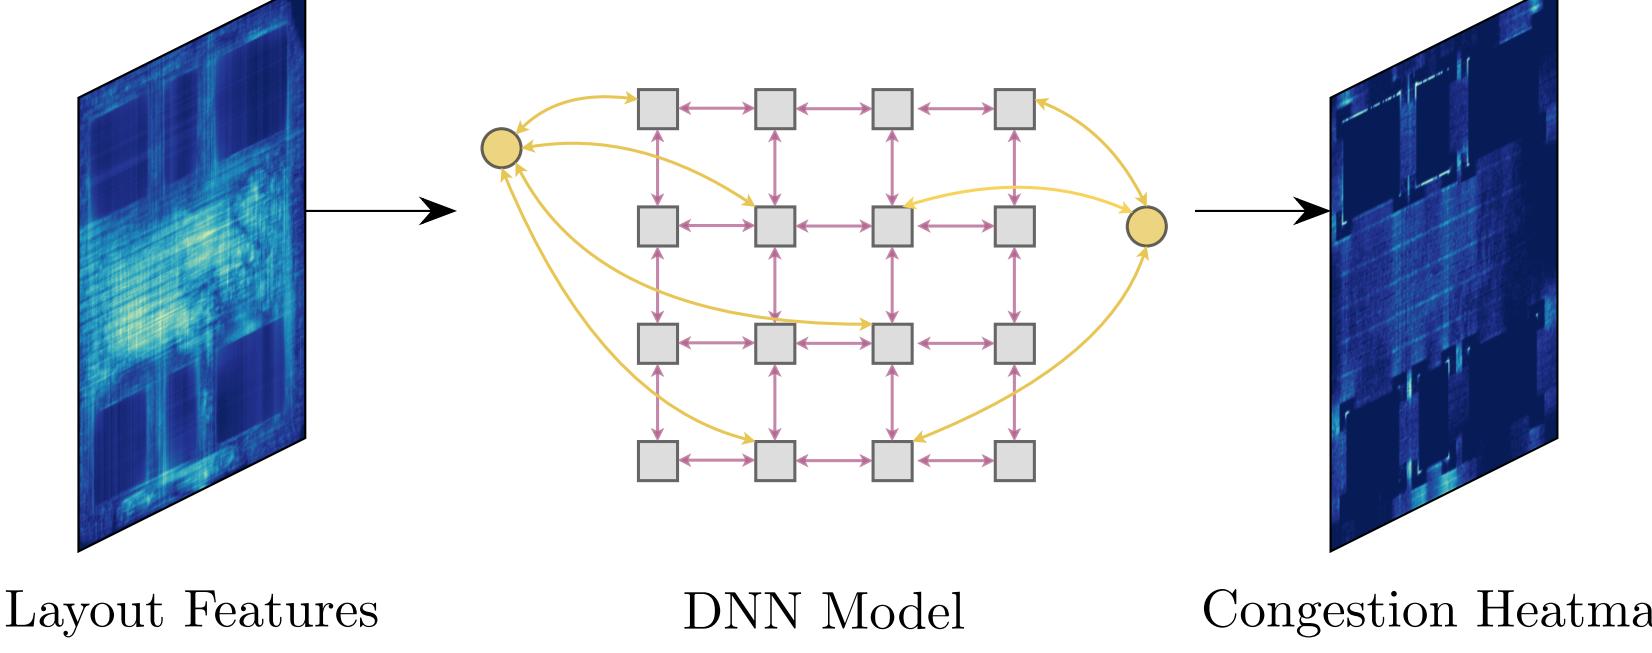

Introduction

- Placement is crucial but time-consuming
- Congestion modeling

- Graph Neural Networks (GNN) [2]

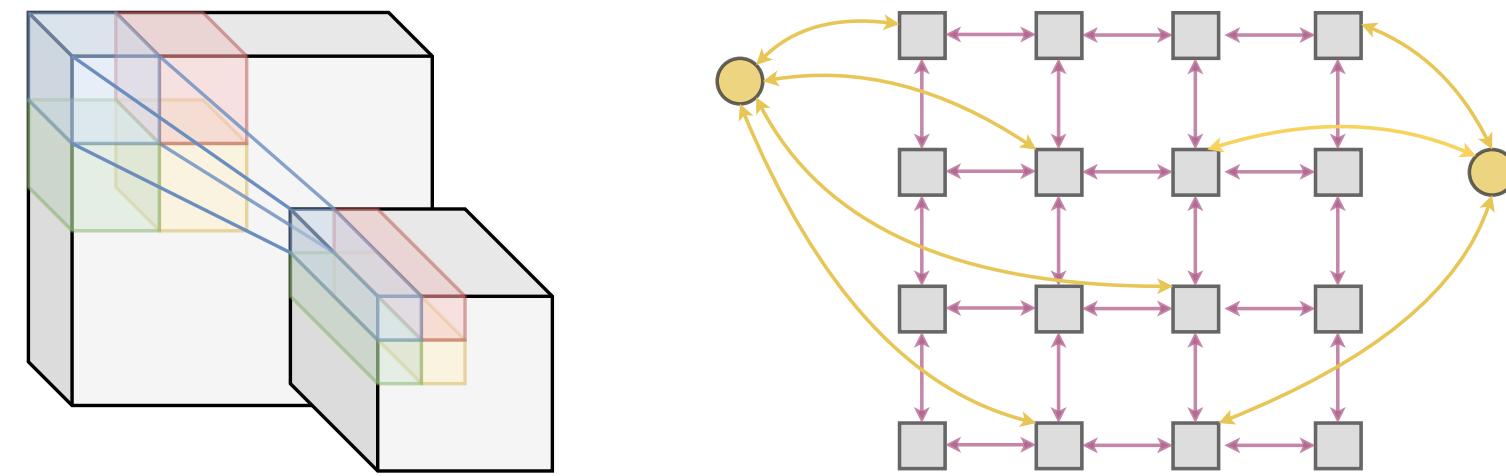

- Accurate congestion prediction → better optimization!

Observations

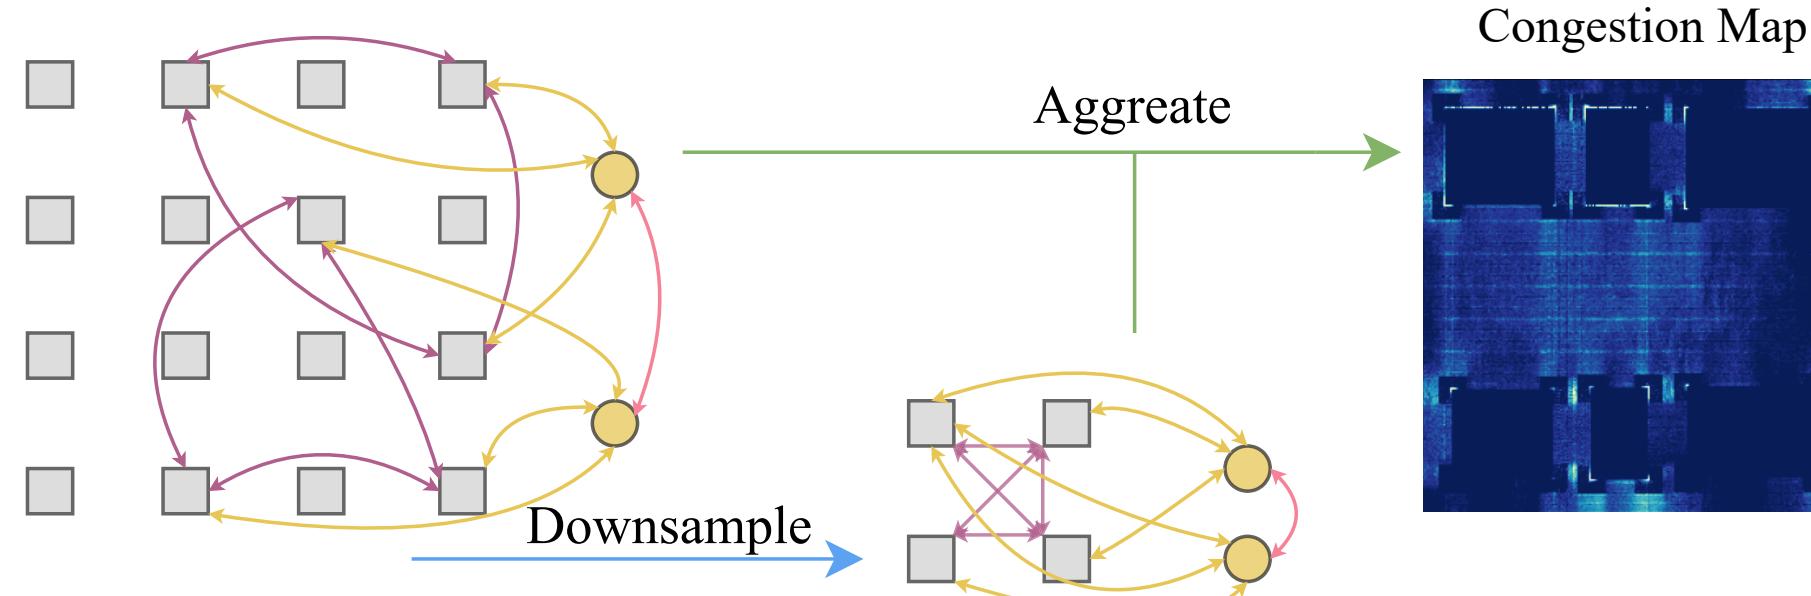

- Existing methods

- Image-based: local perception without global view
- Graph-based: insufficient modeling of physical info.

- What do we need? Netlist + layout!

- Multi-modality → global view + sufficient information

Problem Formulation

- Netlist + layout → congestion heatmap
- \mathcal{G}_H : connection information from the netlist
- \mathbf{X}, \mathbf{Y} : geometric information from the layout

$$L_H(\mathcal{G}_H, \mathbf{X}, \mathbf{Y}) = \frac{1}{NM} \|\mathbf{f}_H(\mathcal{G}_H, \mathbf{X}) - \mathbf{Y}\|_2^2. \quad (1)$$

How to Extract Layout Information?

- Layout Features

- RUDY:

$$\text{RUDY}_e(\vec{x}, \vec{y}) = \left(\frac{1}{x_e^h - x_e^l} + \frac{1}{y_e^h - y_e^l} \right), x \in [x_e^l, x_e^h], y \in [y_e^l, y_e^h]. \quad (2)$$

- PinRUDY:

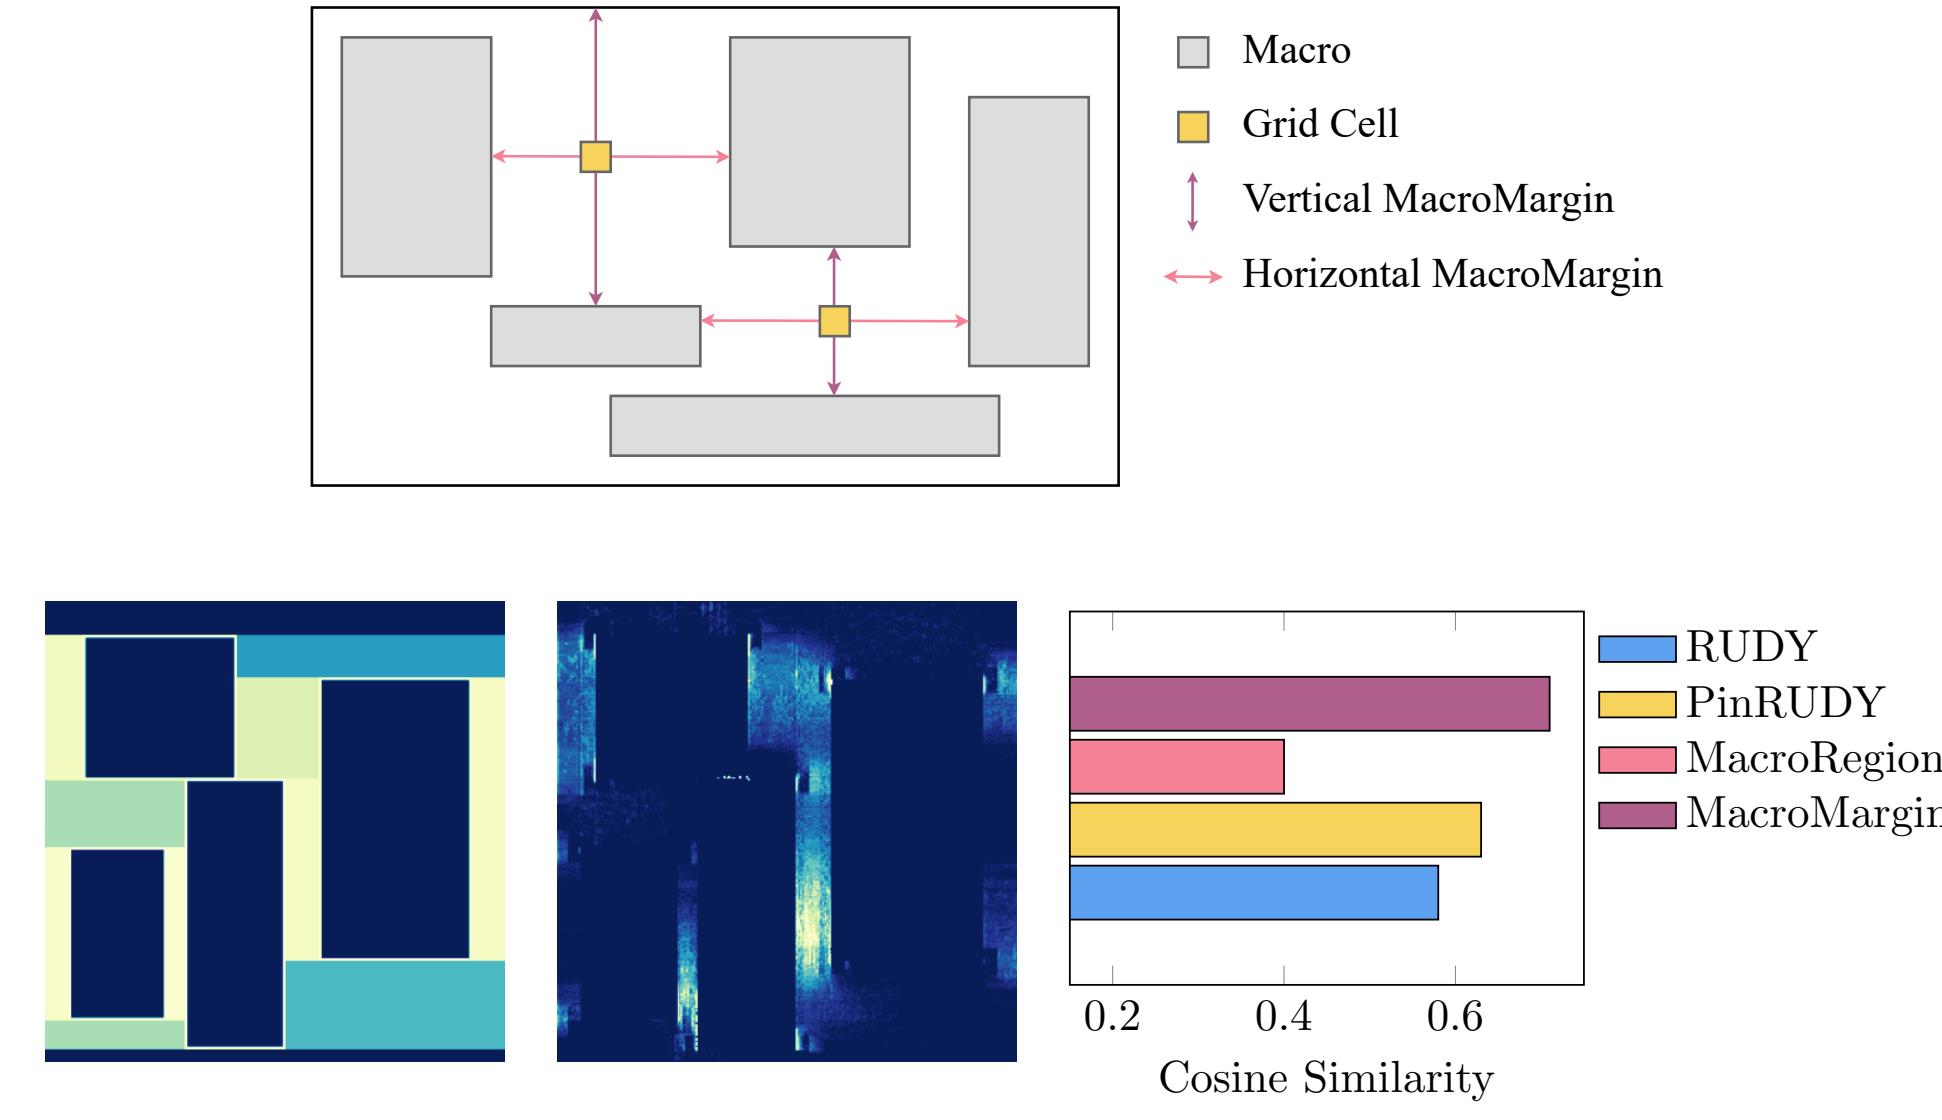

$$\text{PinRUDY}_{pe}(k, l) = \left(\frac{1}{x_e^h - x_e^l} + \frac{1}{y_e^h - y_e^l} \right), (x_{pe}, y_{pe}) \in b_{k,l}. \quad (3)$$

- MacroRegion:

$$\text{MacroRegion}(k, l) = \begin{cases} 1, & \text{if } b_{k,l} \text{ is in a macro cell,} \\ 0, & \text{otherwise.} \end{cases} \quad (4)$$

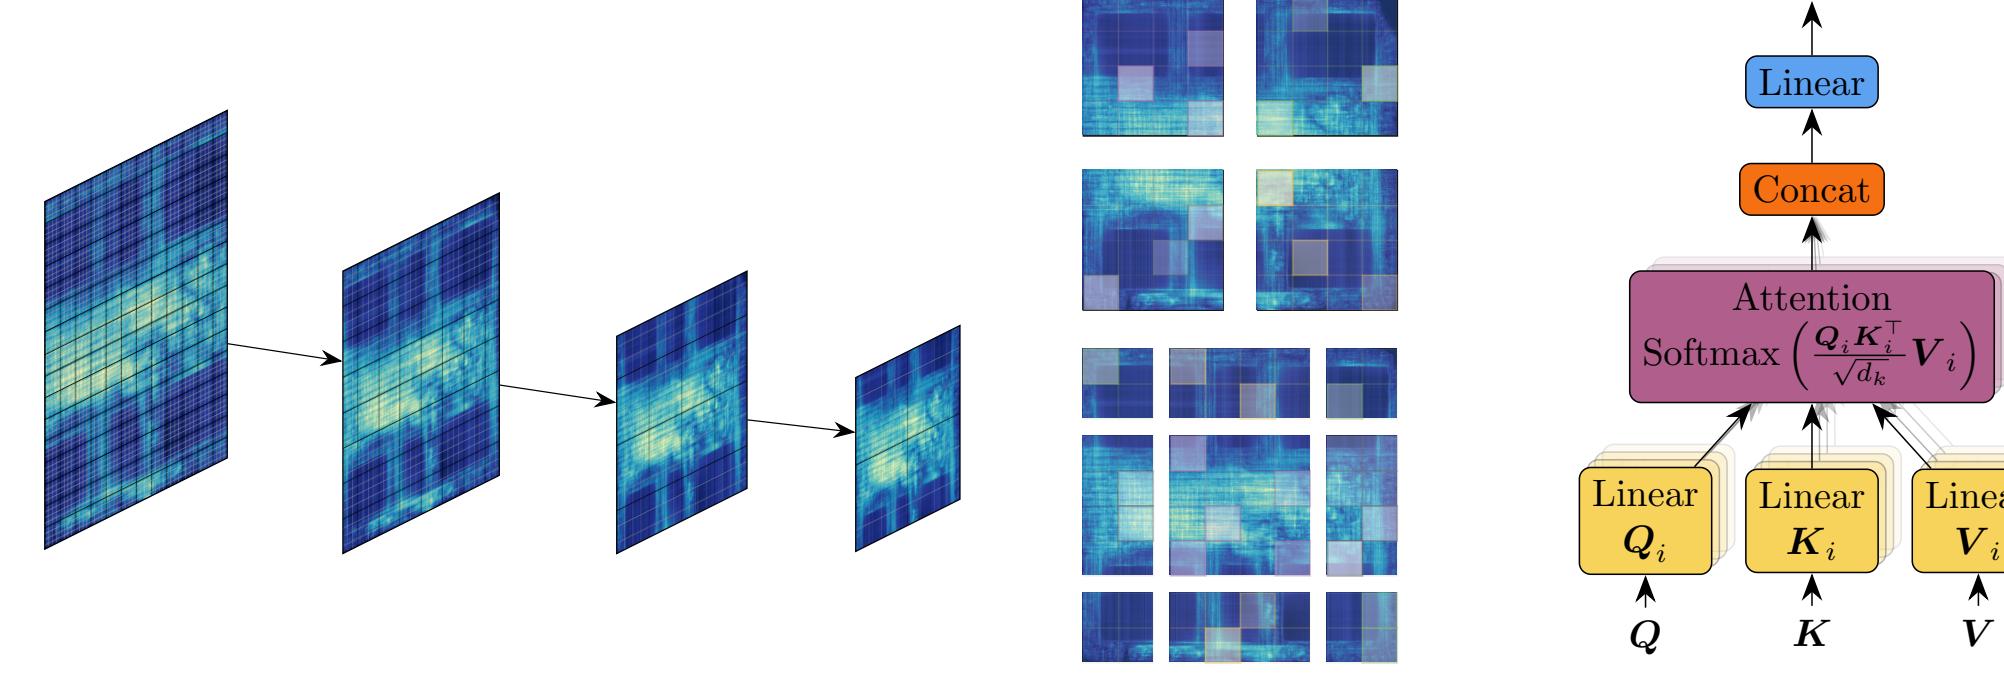

- The novel MacroMargin feature

- MacroMargin has a higher cosine similarity to the results

- Network Design

- Multi-scale feature extraction → global view
- Shifted-window self-attention → local perception
- Based on Swin Transformer → good feature extractor

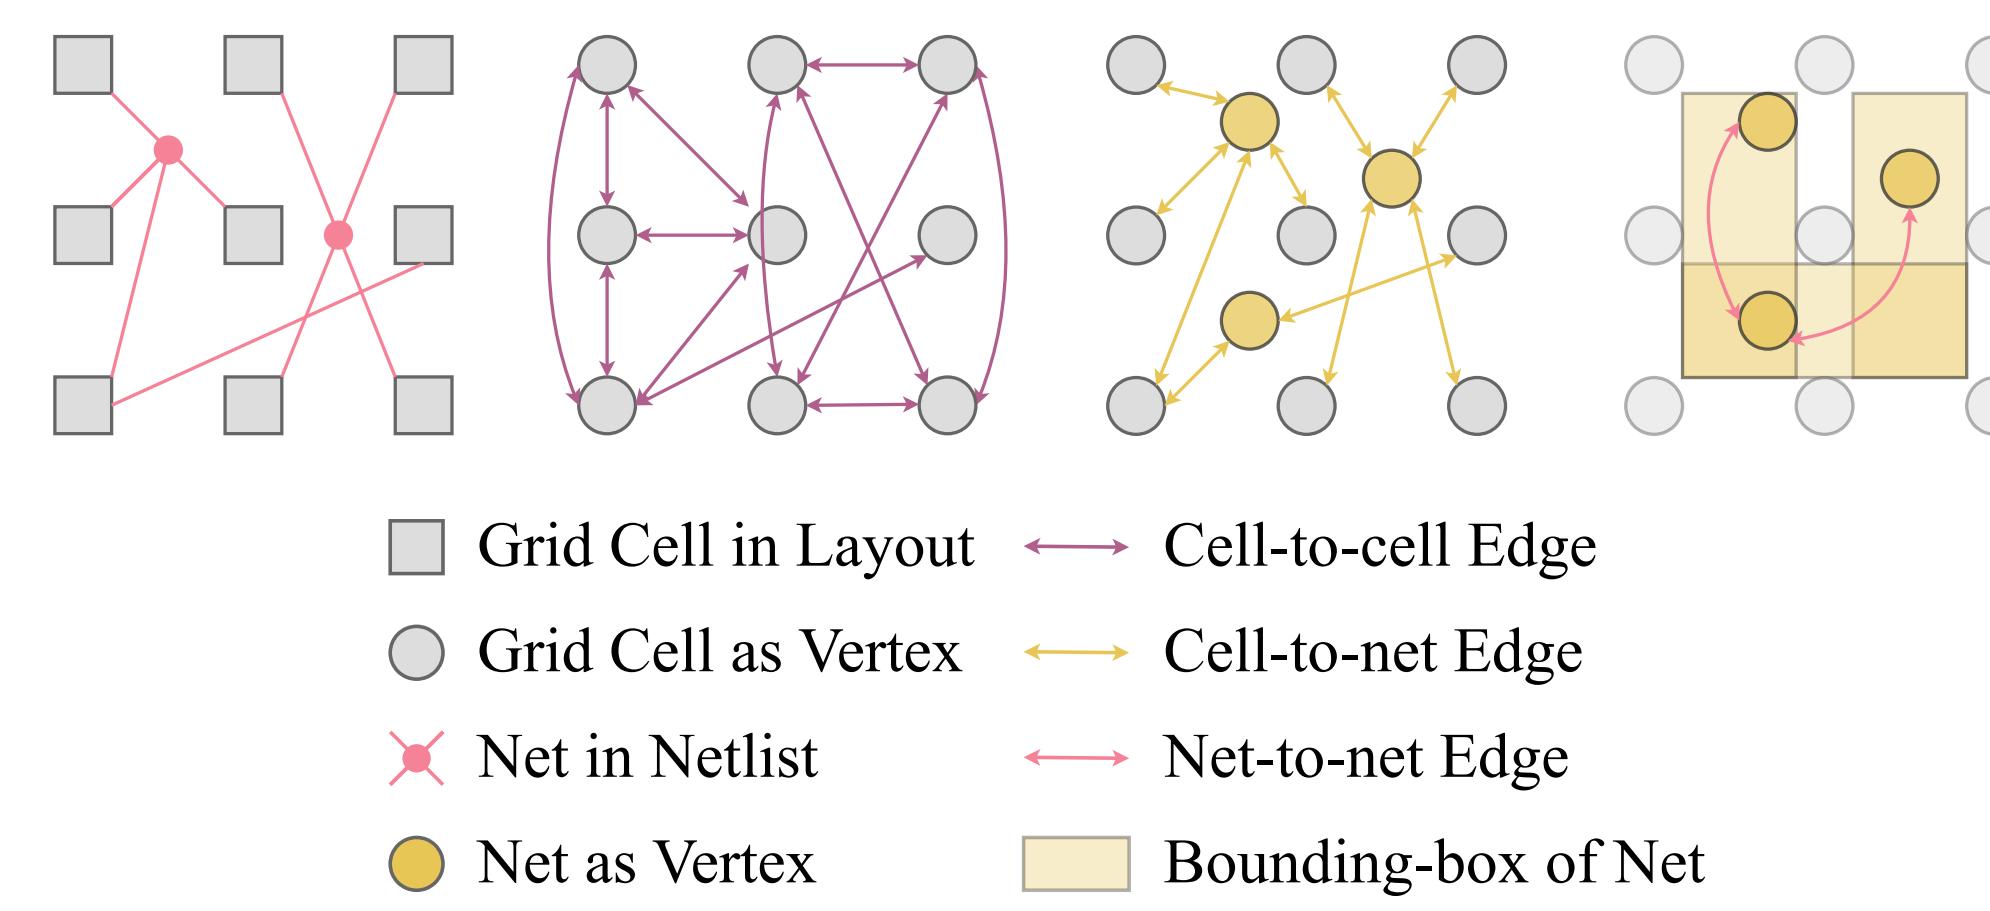

How to Extract Layout Information?

- Graft netlist knowledge on layout-based features!

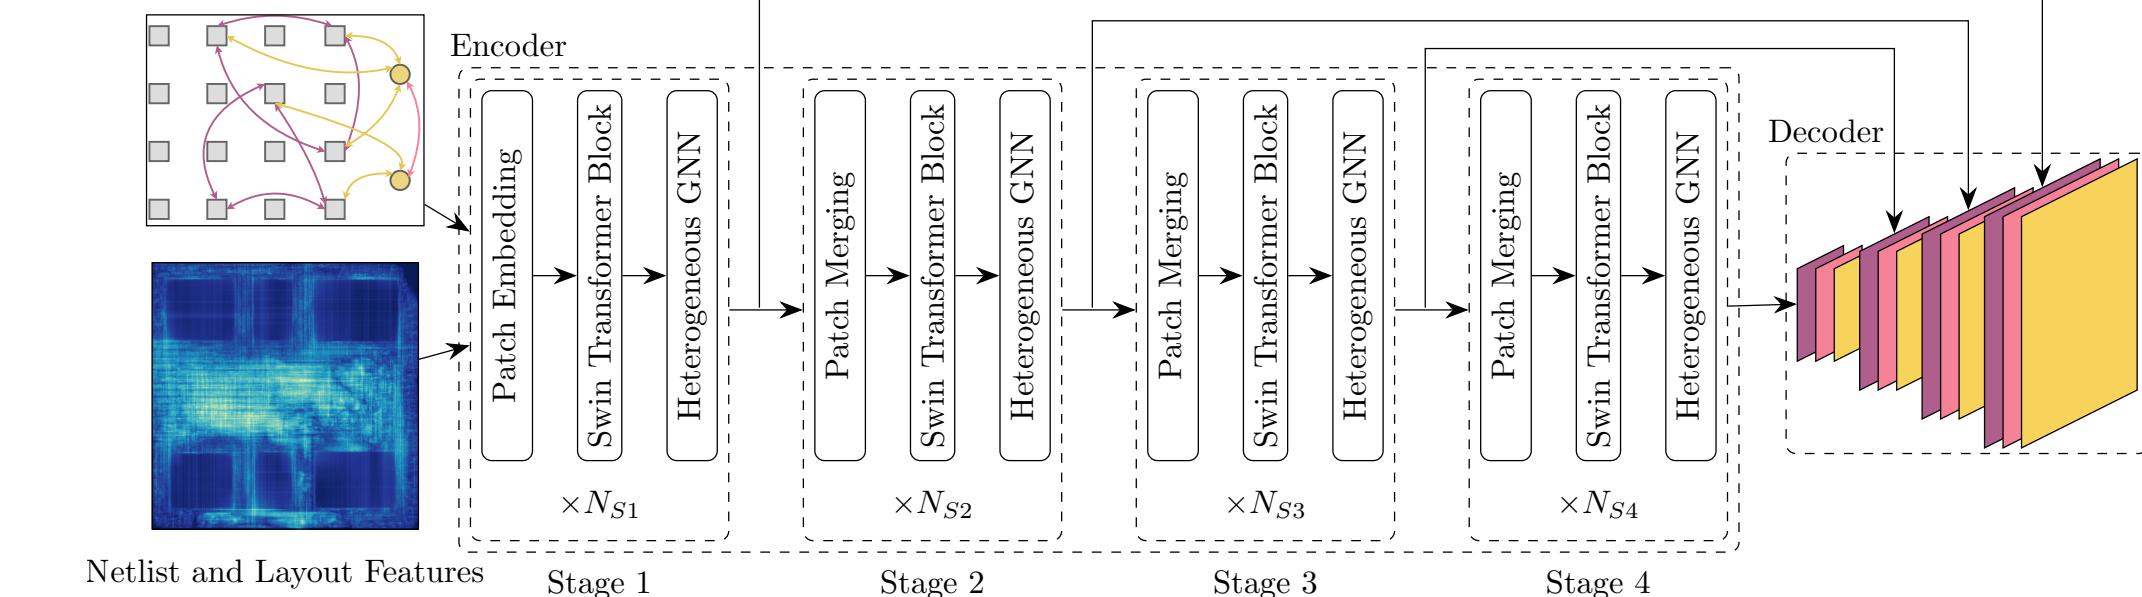

- Heterogeneous Message Passing

- Cell-to-cell Connections
- Cell-to-net Connections
- Net-to-net Connections

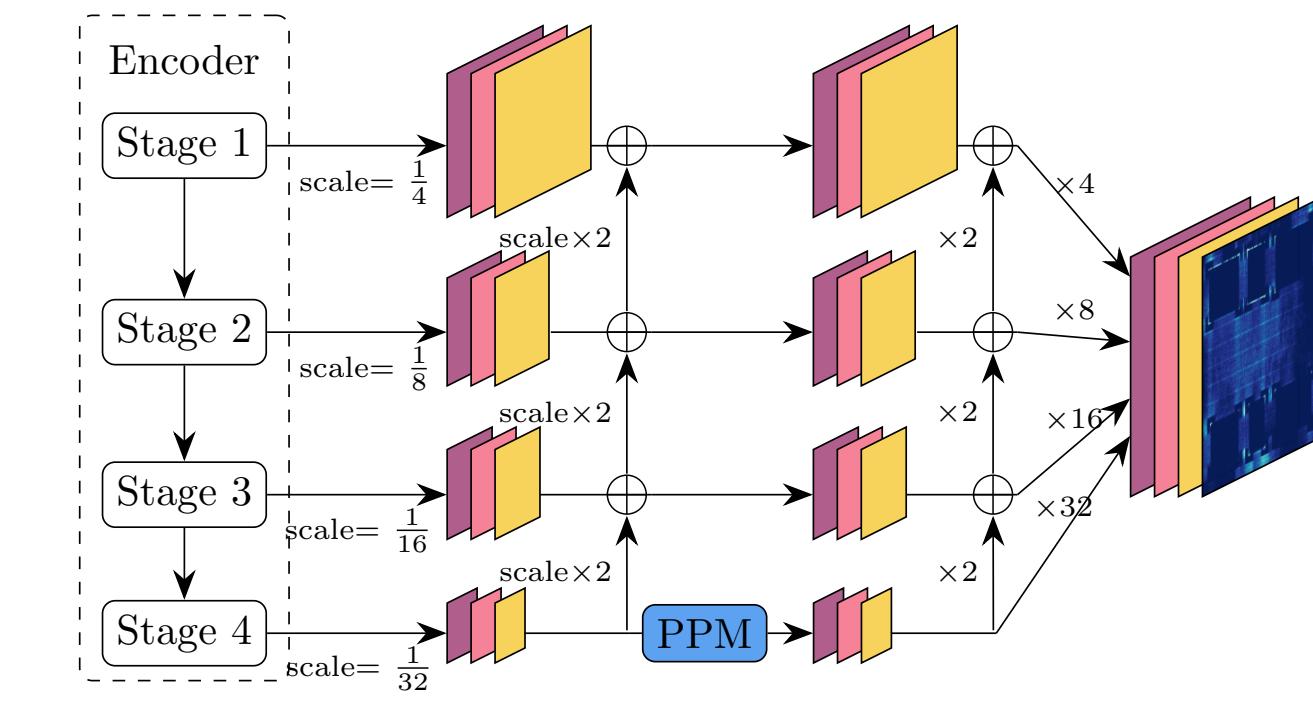

Graft the Netlist Knowledge on the Layout

- Overall Architecture

- The Decoder: UPerNet [4]

- Utilizing the multi-scale features

Comparison Between Ours and Previous Methods

- Comparing the features of different methods

Table 1. Comparison Between Prediction Methods

Characteristic	RUDY-aware	Macro-aware	Routing-free	Global Info.	Cell-to-cell	Cell-to-net	Net-to-net	Multi-scale

Experimental Results

- Dataset: ISPD 2015, half for training, half for testing

$$\text{SSIM}(\bar{\mathbf{Y}}, \mathbf{Y}) = \frac{(2\mu_{\mathbf{Y}}\mu_{\bar{\mathbf{Y}}} + C_1)(2\sigma_{\mathbf{Y}, \bar{\mathbf{Y}}} + C_2)}{(\mu_{\mathbf{Y}}^2 + \mu_{\bar{\mathbf{Y}}}^2 + C_1)(\sigma_{\mathbf{Y}}^2 + \sigma_{\bar{\mathbf{Y}}}^2 + C_2)}. \quad (5)$$

$$\text{NRMS}(\bar{\mathbf{Y}}, \mathbf{Y}) = \frac{\|\bar{\mathbf{Y}} - \mathbf{Y}\|_2}{(Y_{\max} - Y_{\min})\sqrt{N_Y}}, \quad (6)$$

$$\text{Score}(\bar{\mathbf{Y}}, \mathbf{Y}) = \frac{\text{SSIM}(\bar{\mathbf{Y}}, \mathbf{Y})}{\text{NRMS}(\bar{\mathbf{Y}}, \mathbf{Y})}. \quad (7)$$

Table 2. Comparison Between Lay-Net and Previous Methods on ISPD 2015 Benchmark
